

Immunity

How does our immune system protect us from disease?

Why?

One way in which organisms maintain homeostasis is by detecting foreign cells and particles like pathogens and cancer cells. Once the pathogen is detected and identified, other systems in the organism's body can attack the invader, thus keeping the organism healthier. Cells of the human immune system are finely tuned to recognize and respond quickly to disease-causing organisms.

Model 1 – Cell Mediated Response

Chapter 2immune System And Disease Answers
