Holbrow, J. N. Lloyd, J. C. Amato, 1999 This novel text structures a one semester course of introductory physics around the question Why do we believe in atoms and their properties Its theme is thus much of 19th and 20th century physics but it also connects these topics to classical physics The treatment emphasizes quantitative reasoning and analysis how are the ideas of physics inferred from the data and how are the data acquired After a brief review of the basic terminology of mechanics the book begins by introducing the atoms of chemistry elements compounds chemical reactions valence It then turns to the physicist's hard sphere atoms ideal gases pressure temperature viscosity The first hint of subatomic structure comes from the discovery of the electron and the discussion thus turns to electricity magnetism light and x rays This leads in turn to waves and relativity The internal structure of the atom i.e. the nucleus was discovered in the early part of the 20th century and the book concludes with the modern insights into the atom photons radioactivity the particle wave duality quantum
