Symbols and Embodiment Manuel de Vega, Arthur M. Glenberg, Arthur C. Graesser, 2008 Cognitive scientists have a variety of approaches to studying cognition experimental psychology computer science robotics neuroscience educational psychology philosophy of mind and psycholinguistics to name but a few In addition they also differ in their approaches to cognition some of them consider that the mind works basically like a computer involving programs composed of abstract amodal and arbitrary symbols Others claim that cognition is embodied that is symbols must be grounded on perceptual motoric and emotional experience The existence of such different approaches has consequences when dealing with practical issues such as understanding brain disorders designing artificial intelligence programs and robots improving psychotherapy or designing instructional programs The symbolist and embodiment camps seldom engage in any kind of debate to clarify their differences This book is the first attempt to do so It brings together a team of outstanding scientists adopting symbolist and embodied viewpoints in an attempt to understand how the mind works and the nature of linguistic meaning As well as being interdisciplinary all authors have made an attempt to find solutions to substantial issues beyond specific vocabularies and techniques
