Practice Page****9-1****Work and Energy**

1. How much work (energy) is needed to lift an object that weighs 200 N to a height of 4 m?

800 J

2. How much power is needed to lift the 200-N object to a height of 4 m in 4 s?

200 W

3. What is the power output of an engine that does 60,000 J of work in 10 s?

6 kW

4. The block of ice weighs 500 newtons.

- a. What is the mechanical advantage of the incline?

2:1

- b. How much force is needed to push it up the incline (neglect friction)?

250 N

5. All the ramps are 5 m high. We know that the KE of the block at the bottom of the ramp will be equal to the loss of PE (conservation of energy). Find the speed of the block at ground level in each case. [Hint: Do you recall from earlier chapters how long it takes something to fall a vertical distance of 5 m from a position of rest (assume $g = 10 \text{ m/s}^2$)? And how much speed a falling object acquires in this time? This gives you the answer to Case 1. Discuss with your classmates how energy conservation gives you the answers to Cases 2 and 3.]

Case 1: Speed = 10 m/s Case 2: Speed = 10 m/s Case 3: Speed = 10 m/s

Block on A reaches bottom first; greater acceleration and less ramp distance. Although it will have the same speed at bottom, the time it takes to reach that speed is different!

Writing on the Wall Philip Van Notten,2005 Although the significance of 9 11 is subject to debate it is symbolic of a general sentiment of discontinuity whereby society is vulnerable to undefined and highly disruptive events Recent catalysts of this sentiment are eye catching developments such as the SARS Severe Acute Respiratory Syndrome and bird flu outbreaks the Enron and Parmalat scandals political assassinations in Sweden and the Netherlands regime changes in Iraq and Afghanistan and terrorist attacks in Bali Istanbul Madrid and various parts of the Middle East However recent discontinuities should not be seen as evidence that discontinuities occur more frequently now than they did before Looking back in history we see that disruptive processes are common For example 25 years ago few Europeans would have predicted the upcoming upheavals on their own continent the collapse of communism Berlin as the capital of a reunited Germany the wars in the former Yugoslavia the single European currency and the near doubling of the number of European Union member states Changes elsewhere have been no less discontinuous and unforeseen the fall of the Asian tigers the emergence of the Internet and mobile telecommunication and the presidency of Nelson Mandela Societal discontinuity is a relatively new area of concern in policy development Since the 1970s the consideration of change and discontinuity has gained some ground over predictive forecasting which tended to reason from continuous developments and linear processes Rather than making forecasting the future it has become popular to use scenarios as a manner to consider several possible futures Scenarios are coherent descriptions of alternative hypothetical futures that reflect different perspectives on past present and future developments which can serve as a basis for action Scenario development aims to combine analytical knowledge with creative thinking in an effort to capture a wide range of possible future developments in a limited number of outlooks Scenario development assumes that the future is uncertain and the directions in which current developments might range from the conventional to the revolutionary In theory scenario development is a way to consider future discontinuity However there are indications that the theoretical promise is not reflected in scenario practice Research has shown that scenarios do not consider the idea of discontinuity as a matter of course In our research we found that a scenario study would benefit from efforts to create and foster a culture of curiosity for exploring the future and the possible discontinuities rather than simply commissioning a scenario study to provide insights about the future Only then can one read the writing on the wall of future developments **Math K5 for Christian Schools** Diana W.
