Chapter 16 Heat Transfer Transmission of Heat

1. The tips of both brass rods are held in the gas flame. Mark the following true (T) or false (F).

- Heat is conducted only along Rod A. _____
- Heat is conducted only along Rod B. _____
- Heat is conducted equally along both Rod A and Rod B. _____
- The idea that "heat rises" applies to heat transfer by convection, not by conduction. _____

2.

Why does a bird fluff its feathers to keep warm on a cold day? _____

3. Why does a down-filled sleeping bag keep you warm on a cold night? Why is it useless if the down is wet? _____

4. What does convection have to do with the holes in the shade of the desk lamp? _____

5. The warmth of equatorial regions and coldness of polar regions on the Earth can be understood by considering light from a flashlight striking a surface. If it strikes perpendicularly, light energy is more concentrated as it covers a smaller area; if it strikes at an angle, the energy spreads over a larger area. So the energy per unit area is less.

The arrows represent rays of light from the distant sun incident upon the Earth. Two areas of equal size are shown, Area A near the north pole and Area B near the equator. Count the rays that reach each area, and explain why B is warmer than A.

Characterizing Expert and Novice Differences in Problem Solving in Heat Transfer Sarah Elizabeth Parikh, 2011 This research investigates adaptive expertise through the analysis of written open ended questions The open ended questions were given to experts advanced graduate students and to novices undergraduates taking an introductory heat transfer course Analysis of the experts responses to these questions indicated that experts make qualifying statements in their responses a newly identified characteristic of expertise Analysis of the novices responses indicates areas for future work in research and teaching Additionally the wording of the open ended questions appears to be important the responses to questions that asked participants to choose an outcome showed greater differences between the expert and novice participants than questions that asked participants to explain how or why something happens
