

Work, energy, and power

→ Energy conservation

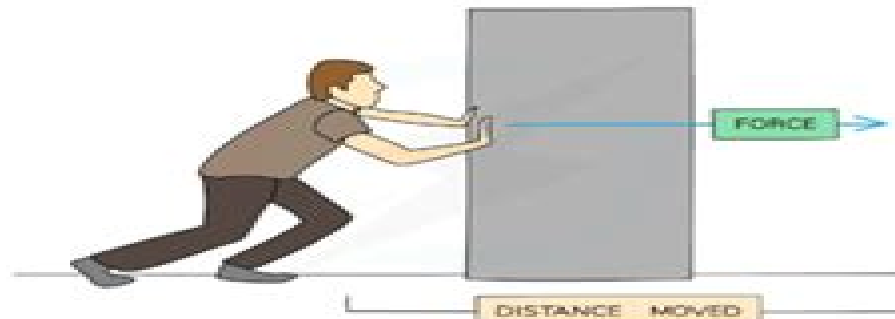

- *The concept of work (done)*

- In Physics, **work is done** when an **object is moved** over a distance by an external force applied in the direction of its displacement
- Simply, it's the force x displacement moved in the direction of the force

$$W = F \cdot d$$

Diagram illustrating the formula $W = F \cdot d$. The formula is centered, with arrows pointing from it to three boxes: "WORK DONE (J)" on the left, "FORCE (N) APPLIED IN DIRECTION OF DISPLACEMENT" on the top right, and "DISPLACEMENT (m)" on the bottom right.

- In the diagram below, the man's pushing force on the block is doing work as it is transferring energy to the block (increasing its kinetic energy)

Work is done when a force is used to move an object over a distance

- When work is done, energy is transferred from one object to another
- Work done can be thought of as the amount of **energy transferred**, hence its units are in **Joules (J)**
- Usually, if a **force acts in the direction** that an object is moving then the object will **gain energy**
- If the **force acts in the opposite direction** to the movement then the object will **lose energy**
