Balas, 2018-12-14 The book covers all the important aspects of research methodology and addresses the specific requirements of engineering students such as methods and tools in detail. Further, the book also considers soft skills like research management and planning, dealing with criticism in research, and presentation skills which are all equally important and need to be included in research methodology education. Research in Technical Communication Michael G. Moran, Debra Journet, 1985 This sourcebook demonstrates the vigorous work being done in the field of technical and scientific communication. Collectively, the essays offer researchers a basis from which to begin constructing the theoretical framework necessary for the study of technical communication. The book begins with general concerns and progresses to particular applications. The chapters comprising Part I outline larger theoretical perspectives from which to examine technical communication, humanistic approaches to technical communication, the history of technical communication, communication theory, and technical writing, and the teaching of technical writing. Part II examines the relationship of technical communication to traditional rhetorical concerns such as invention, audience, modes of organization, and style. Specific types of technical communication, proposals, reports, and business correspondence, among others, are discussed in Part III. The use of the computer, oral presentations, and specialized forms of technical communication are examined in Part IV. The appendixes offer guides to textbooks and style manuals and an overview of the technical writing profession.

Technical Communication Maris Roze, 1990 This practical, user-friendly guide explores common on-the-job writing communication requirements. The book uses clear, simple, concrete language and avoids jargon. It reveals that technical writing communication skills are an essential part of their career preparation. The assignments provide realistic simulations of career requirements and work activities of technical and business professionals. It offers a modular approach that allows you to choose among topics to fit particular needs and preferences. The modules focus on a specific writing communication situation rather than on general cases and on the logic of a particular format for that situation.
