The objectives of this project are focused on a new cone penetration testing CPT geotechnical design manual for highway and transportation applications based on recent research and innovation covering the period from 2000 to 2018 A step by step procedure is outlined on how to use CPT data in the analysis and design of common geotechnical tasks Previous manuals are either very outdated with information from 1970 1996 or not appropriately targeted to transportation works This design document introduces modern and recent advancements in CPT research not otherwise captured in legacy manuals from the 1990 s and earlier Examples and case studies are provided for each topic interpreted using CPT measures In the manual a step by step procedure is outlined on how to use CPT data in analysis and design for typical geotechnical practices These topics which are applicable both to state highways and local roads include bridge foundations including shallow footings and deep foundations and soil characterization including determination of standard soil engineering properties *Geotechnical and Geophysical Site Characterization* António Viana da Fonseca,Paul W. Mayne,2004

Soils and rocks are complex natural geomaterials that exhibit a wide range in strength stiffness state of stress structure and flow characteristics Geotechnical Geophysical Site Characterization provides eleven keynote state of the art papers including the Mitchell Lecture A total selection of 219 technical papers and theme reports address methods of site exploration related to ground exploration for civil engineering and construction works These two volumes represent a collection of experience knowledge regarding various methods of in situ testing geophysical techniques innovative devices improved interpretation algorithms and statistical treatment of field data for the characterization of soils rocks and other geomaterials The papers represent the written records and documented efforts from international experts from industry academe and government who participated in the Second International Conference on Site Characterization held in Porto Portugal on September 20 22 2004 Topics include the utilization of rotary drilling sampling and coring techniques Of particular interest is the variety of in situ tests including standard penetration
