A resource for middle schoolers.

## What are Sedimentary Rocks?

Sedimentary rocks are like nature's history books! They are formed from sediments, which are small pieces of other rocks, minerals, and even the remains of plants and animals. Think of it like a layered cake, with each layer telling a story about the past.

Here's the key idea: **Sedimentary rocks are made from stuff that has settled somewhere!**

## How Do Sedimentary Rocks Form?

There are several steps involved in the formation of sedimentary rocks. Let's break them down:

1. **Weathering and Erosion:** Big rocks are broken down into smaller pieces (sediments) by wind, rain, ice, and sun. This is called *weathering*. Then, these sediments are carried away by wind, water, or ice. This is called *erosion*.
2. **Transportation:** Sediments are moved from one place to another by rivers, glaciers, wind, or ocean currents. Think of a river carrying sand and mud downstream.
3. **Deposition:** Eventually, the sediments settle down in a new location, like the bottom of a lake, ocean, or desert. This is called *deposition*. Imagine all the sand settling at the bottom of a river.
4. **Compaction and Cementation:** Over time, more and more layers of sediment pile up. The weight of these layers compresses the bottom layers, squeezing out water. Then, minerals dissolved in the water act like glue, *cementing* the sediments together to form solid rock. This is like making concrete!
