

Chapter 4 Word processing

Unit 1 Formatting and customising documents (Term 1)

1 File management

- Windows Explorer is a file manager that helps to keep work organised when working with electronic documents. A file manager allows you create, copy, move, rename and delete files and folders.
- When working with a file manager, remember:
 - File and folder names should be meaningful and should describe the contents.
 - File names must be short.
 - File extensions are used to determine which application can open a particular file.

1.1 Printing and print options

It is good practice to make changes to the printer settings and controls before printing. Open the Print dialogue box (Ctrl+P) to select your own printing preferences, for example:

- choose All to print all the pages in a document
- select Current page to print only the page that the cursor is currently on
- select Pages - to print specific pages of a document
- select Number of copies - to select the number of copies to print.

1.2 Sending a copy of the document

Some word processors allow users to send documents from the word processor to another application, such as e-mail. At the Send option, Office Button, you can:

- e-mail the document as an attachment
- e-mail the document as a PDF attachment
- e-mail the document as an XPS attachment
- send the document to an Internet Fax.

1.3 Convert a document

- Some word processing applications will inform you they are in compatibility mode.
- Files that are compatible with other applications are capable of being processed on another computer without any changes.
- Convert the document to the relevant file format at the Office button, Convert, OK.

2 Input data from different file formats

- A file format determines the way in which data is stored in a file.
- The file extension is used by the computer to determine which program is used to open a particular file. For example:
 - TXT file –contains text without any formatting.
 - RTF- may contain formatted text and graphics.
 - CSV (comma separated values or comma delimited file) - is a plain text file where each field in the file is separated from the next field by a comma.
- Tables – data can be transferred from a spreadsheet by copying the data and pasting it into a word processing document as a table.
- To convert files to and from MS Word, right-click on the file and select Open with. From the list of options, select the program you want to open the file.
