

Heater Not Working

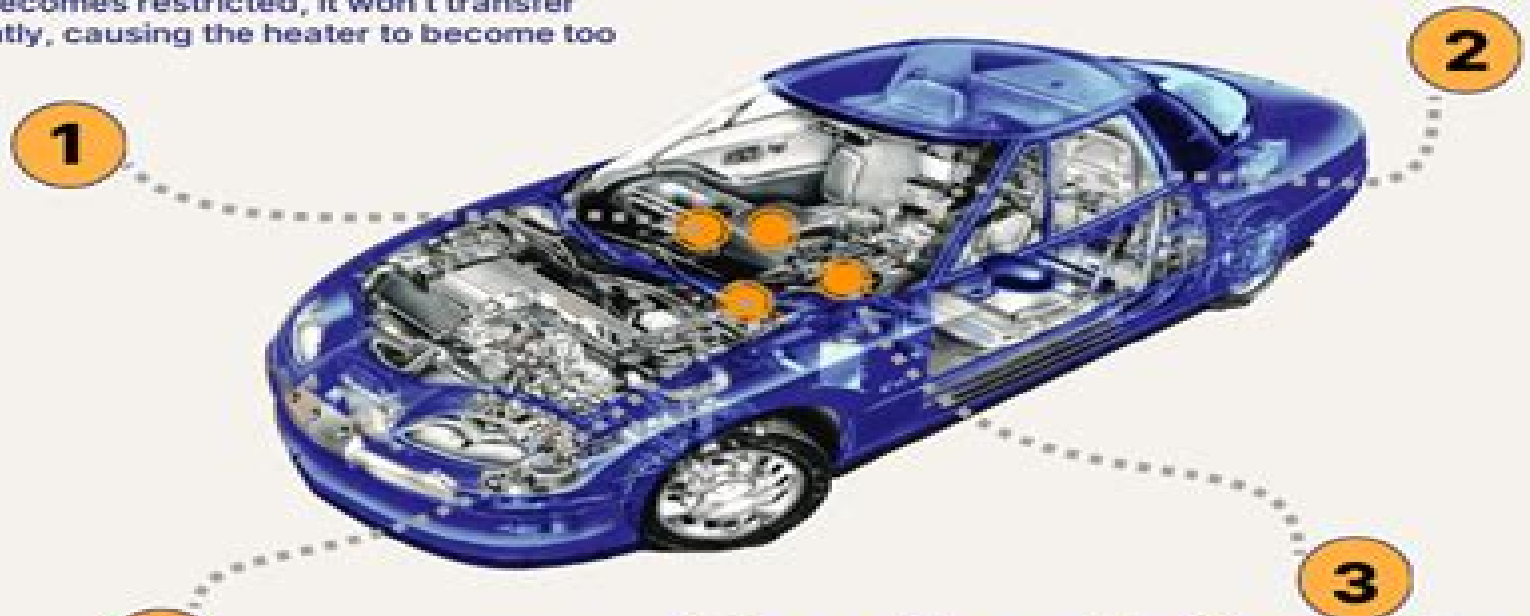

The heater isn't working because of issues with the blower motor. This can be caused by internal damage or wiring problems.

Blower Motor

Faulty wiring can lead to intermittent electrical connections, causing the blower motor to stop working.

Heater Core

If the core becomes restricted, it won't transfer heat efficiently, causing the heater to become too weak.

Blend Door Actuator

If the actuator fails or becomes stuck, it may prevent the blend door from moving properly. This can result in the heater not regulating temperature.

Coolant Control Valve

The Coolant Control Valve controls the flow of hot coolant. If the valve is stuck in the closed position the heater will not produce warm air.
