Homework: Ecological Succession

Use the diagram below and your notes to answer the following questions about succession.

1. *Biomass* is the amount of living material present in an environment. *Biodiversity* refers to the variety of living things that are present in an ecosystem. Which of the following would you expect to occur over time as ecological succession moves forward?

- A** increases in both biomass and biodiversity
- B** decreases in both biomass and biodiversity
- C** increases in biomass, but decreases in biodiversity
- D** decreases in biomass, but decreases in biodiversity

2. Which of the following animal niches will be filled first as an ecosystem begins the stages of ecological succession?

- A** carnivore
- B** scavenger
- C** herbivore
- D** apex predator

3. New ground begins as barren rock. This rock is covered in lichens and mosses, and eventually soil forms. Which two processes are most responsible for forming this soil at the beginning of ecological succession?

- A** Subduction and Deformation
- B** Transpiration and Precipitation
- C** Weathering and Decomposition
- D** Crystallization and Condensation

4. The diagram above shows how one community of organisms replaces another until which of the following is reached?

- A** pioneer community
- B** marine biome
- C** ecological pyramid
- D** climax community

5. Lava from a volcano cools and becomes new, barren land. If this land is completely *barren*, then it would contain –

- A** only abiotic factors
- B** only biotic factors
- C** both abiotic and biotic factors
- D** neither abiotic or biotic factors

6. The diversity of animals increases alongside plants because larger plant communities provide

- A** defense from attack by parasites
- B** more sunlight to warm the ecosystem
- C** more chemical energy in the food chain
- D** fewer places for prey animals to hide

Teaching and Learning Online Franklin S. Allaire, Jennifer E. Killham, 2023-01-01 Science is unique among the disciplines since it is inherently hands on. However the hands on nature of science instruction also makes it uniquely challenging when teaching in virtual environments. How do we as science teachers deliver high quality experiences to secondary students in an online environment that leads to age grade level appropriate science content knowledge and literacy but also collaborative experiences in the inquiry process and the nature of science? The expansion of online environments for education poses logistical and pedagogical challenges for early childhood and elementary science teachers and early learners. Despite digital media becoming more available and ubiquitous and increases in online spaces for teaching and learning Killham et al 2014 Wong et al 2018 PreK-12 teachers consistently report feeling underprepared or overwhelmed by online learning environments Molnar et al 2021 Seaman et al 2018. This is coupled with persistent challenges related to elementary teachers' lack of confidence and low science teaching self-efficacy. Brigido Borrachero Bermejo Gunning Duran Duran 2004. Ideal for undergraduate teacher candidates, graduate students, teacher educators, classroom teachers, parents, and administrators, this book addresses why and how teachers use online environments to teach science content and work with elementary students through a research-based foundation.

Pakeman, 1993 *Ecological Succession* Graham Martin, 1978 *Primary Succession in Man-made Environments* Sven-Olov Borgegård, 1990 **Is Ecological Succession Predictable?**, 2005 A literature study is presented on the predictability of ecological succession. Both equilibrium and nonequilibrium theories are discussed in relation to competition between and co-existence of species. The consequences for conservation management are outlined and a research agenda is proposed focusing on a nonequilibrium view of ecosystem functioning. Applications are presented for freshwater, marine, dune, and forest ecosystems.

Is Ecological Succession Predictable? Koen Kramer, 2005 *Forest Succession* Henry S. Horn, 1975 Primary Succession on Land John Miles, 1993-01-01 In the past research into succession has concentrated on the widespread communities of grassland, herbfield, and forest. However the initial stages of a community are associated with algae, lichens, and mosses, and despite their importance as primary colonizers little attempt has been made to include the microbial community and its effects within the framework of primary succession. Accepting that it is at the microscopic level that any consideration of primary succession must start, this volume draws together microbiologists, ecologists, botanists, and zoologists into a more coherent discussion of the early stages of community development. New techniques allow observation and experimentation at the microbial level, and the ecological opportunities offered by the Mount St Helens eruption have been exploited to shed more light on the processes of primary succession.
