

**INTRODUCTION:** Evidence has been found to indicate that living things have changed gradually during their natural history. The study of fossils as well as embryology, biochemistry, and comparative anatomy provides evidence for evolution.

**OBJECTIVE:** In this lab activity you will learn about homologous, analogous, vestigial structures, fossils, embryology and biochemistry and their significance in evolution theory.

**MATERIALS:** Map Pencils

## PROCEDURES:

### I. COMPARATIVE ANATOMY

#### HOMOLOGOUS STRUCTURES

1. Carefully examine the drawings of the bones. Look for *similarities* among the various animals.
  - a. **COLOR** each part of the human arm a different color. (All bones of the wrist should be the same color, the bone groups of the hand should be a different single color.) Then **color** the corresponding bone in each of the other animals the same color as the human bone.
  - b. In Table 1 (question #2 on the *Answer Sheet* describe the **function** of each set of bones and answer the question.)

#### ANALOGOUS STRUCTURES

2. Examine the butterfly wing and the bird wing. Answer questions 4 - 6 on the answer sheet.

#### VESTIGIAL STRUCTURES

Gradual changes have occurred through time that have in some cases reduced or removed the function of some body structures and organs. The *penguin's wings* and the *leg bones of snakes* are examples of this phenomenon.

3. The cave fish and minnow are related, but the cave fish is blind. Answer questions 7-8 on the answer sheet.

4. Read the list of *human vestigial* structures in Table 2 (question #9). Suggest a *possible function* for each structure and explain *why* it became vestigial. Then complete questions 10 -12

**The Evolution of Imperfection** Laurence D. Hurst, 2025-04-08 How understanding our genetic imperfections can change our view of evolution and enrich what it means to be human If we start with the presumption that evolution is a constantly improving process some aspects of our evolution just do not make sense We have a high rate of genetic diseases for example and much of our DNA seems to be pointless In *The Evolution of Imperfection* Laurence Hurst explores our apparently rotten genetic luck Hurst a leading authority on evolution and genetics argues that our evolutionary imperfections proceed directly from two features the difficulties of pregnancy and the fact that historically there are relatively few of us In pregnancy natural selection can favor chromosomes that kill embryos in species including ours that continuously receive resources from the mother Most fertilized eggs don't make it and incompatibilities between the fetus and mother can lead to lethal disorders of pregnancy The historically small population size enhances the role of chance which in turn leads to both accumulation of unnecessary DNA and more mutation So what can save us One answer may lie in genetic medicine which has given us therapies that make killer conditions preventable and even curable Hurst suggests that our seeming imperfections could be the key to a new way to understand evolution itself Looking at circumstances that seem to defy explanation we might come to a richer understanding of how evolution really works and what it means to be human **Geological Survey**
