

## **GEOGRAPHY PAPER 1 REVISION QUESTIONS AND ANSWERS**

### **1. Outline the theories (evidences) that prove the shape of the earth as being spherical and not flat:**

If the earth were flat the sun would rise and set at the same time for people in all countries. As we know, the times of sunrise and sunset vary in different parts of the world. This is due to the shape of the earth.

The sun, the moon, the stars and other heavenly bodies always appear to be circular in outline. We can therefore conclude that they are spherical in shape. The earth should not be the only exception.

The shadow of the earth always has a circular edge. This can be noticed by observation of the earth's shadow on the moon during eclipse.

Viewed from the deck of a ship at the sea, the horizon appears to be circular.

An observer on a cliff watching the approach of a ship sees first the smoke, then the funnel and lastly the hull. If the earth were flat the whole of the ship would be seen all at once.

We know that we can travel round the world in various directions, and come back to the starting point. This is known as the circumnavigation of the earth.

Photographs radioed back by artificial earth satellites show the circular outline of the earth.

### **2. (a) Explain the two movements of the earth:**

The earth moves in two ways. Firstly it rotates on its axis, making a complete rotation in twenty-four hours.

Secondly it revolves around the sun, making one complete revolution in approximately 365  $\frac{1}{4}$  days. Its path of revolution is known as its orbit.

#### **(b) (i) State the effects of the rotation of the earth:**

It causes day and night.

It causes the deflection of wind and ocean currents.

It causes the daily rising and falling of the tides.

It causes a difference in time i.e. one hour between two meridians (longitudes) 15° apart.

It causes variation in atmospheric pressure on the earth's surface.

#### **(ii) State the effects of the earth's revolution:**

Is responsible for the change of the seasons (the four seasons).

It causes the varying lengths of day and night at different times of the year.

It changes the altitudes of the midday sun at different times of the year.

It fixes the tropics and the Arctic and Antarctic circles i.e. the varying positions of the earth in relation to the sun.

### **3(a) Draw a well-labelled diagram showing the main parts (zones) of the internal structure of the earth:**

A - SIAL

B - SIMA

C - MOHO DISCONTINUITY

D - UPPER MANTLE

E - LOWER MANTLE
