André Garon, Michel C. Delfour, 2022-03-25 This book introduces transfinite interpolation as a generalization of interpolation of data prescribed at a finite number of points to data prescribed on a geometrically structured set such as a piece of curve surface or submanifold The time independent theory is readily extended to a moving deforming data set whose dynamics is specified in a Eulerian or Lagrangian framework The resulting innovative tools cover a very broad spectrum of applications in fluid mechanics geometric optimization and imaging The authors chose to focus on the dynamical mesh updating in fluid mechanics and the construction of velocity fields from the boundary expression of the shape derivative Transfinite Interpolations and Eulerian Lagrangian Dynamics is a self contained graduate level text that integrates theory applications numerical approximations and computational techniques It applies transfinite interpolation methods to finite element mesh adaptation and ALE fluid structure interaction Specialists in applied mathematics physics mechanics computational sciences imaging sciences and engineering will find this book of interest      Modeling and Simulation of Chemical Process Systems Nayef Ghasem, 2018-11-08 In this textbook the author teaches readers how to model and simulate a unit process operation through developing mathematical model equations solving model equations manually and comparing results with those simulated through software It covers both lumped parameter systems and distributed parameter systems as well as using MATLAB and Simulink to solve the system model equations for both Simplified partial differential equations are solved using COMSOL an effective tool to solve PDE using the fine element method This book includes end of chapter problems and worked examples and summarizes reader goals at the beginning of each chapter
