**Laboratory Manual in Concrete Technology** P. D. Kumbhar, 2014-12-15 Concrete is the most widely used man made product in the world and is second only to water as the world's most utilized substance. It is an affordable and reliable material that is applied throughout the infrastructure of any nation's construction, industrial, transportation, defence, utility and residential sectors. In its simplest form, it is a mixture of cement paste and aggregates. For producing quality concrete, not only good quality ingredients are necessary but good rules in manufacturing concrete are also essential. The quality of the ingredients is always judged in the laboratory by performing various tests on them by following standard procedures. This manual has been prepared in order to impart efficient learning of student through outcomes based education suggested by ABET. This system covers all aspects of research and test plans, standard and nonstandard test methods, data analysis and documentation for projects undertaken within or contracted from the CTD. It describes implementation of the system among CTD staff, emphasizing calibration and verification of test equipment, training in quality assurance and standard practices and documentation of these. It includes descriptions of systems for numbering research and test materials, specimens and guidelines for justified departures from the American Society for Testing and Materials (ASTM) or other standard practices. The use of such communication tools as Research and Technical Project Plans, nonconformance reports and other standard forms of documentation are described.
