

Practice with Physical and Chemical PROPERTIES and CHANGES

Physical vs Chemical PROPERTIES

A **physical property** is observed with the senses and can be determined without destroying the object. For example: colour, shape, mass, length, density and odour are all examples of physical properties.

A **chemical property** indicates how a substance reacts with something else. When a chemical property is observed, the original substance is changed into a different substance. For example: the ability of iron to rust is an example of a chemical property. The iron has reacted with oxygen and the original iron metal is gone. It is now iron oxide, a new substance. All chemical changes include physical changes.

Classify the following properties as either physical or chemical by putting a check in the appropriate column:

	Physical Property	Chemical Property
1. Red colour	✓	
2. Density	✓	
3. Flammability		✓
4. Solubility	✓	
5. Reacts with acid to form hydrogen		✓
6. Supports combustion		✓
7. Bitter taste	✓	
8. Melting point	✓	
9. Reacts with water to form a gas		✓
10. Reacts with a base to form water		✓
11. Hardness	✓	
12. Boiling point	✓	
13. Can neutralize a base		✓

Physical vs Chemical CHANGES

In a **physical change**, the original substance still exists (its particles are still the same); it has simply changed in form (rearrangement of particles). Energy changes usually do not accompany physical changes, except in phase changes and in some cases, when substances dissolve.

In a **chemical change**, a new substance is produced. Energy changes always accompany chemical changes. Chemical changes are also always accompanied by physical changes.

Classify the following as examples of a physical change, a chemical change or both kinds of change:

1. Sodium hydroxide dissolves in water.
2. Hydrochloric acid reacts with sodium hydroxide to produce a salt, water and heat.
3. A pellet of sodium is sliced in two.
4. Water is heated and changed into steam.
5. Potassium chlorate decomposes into potassium chloride and oxygen gas.
6. Iron rusts.
7. Ice melts.
8. Acid on limestone produces CO_2 gas.
9. Milk sours.
