SIGCSE Technical Symposium on Computer Science Education, 1986 Picturing Programs Stephen Bloch, 2010 A first programming course should not be directed towards learning a particular programming language but rather at learning to program well the programming language should get out of the way and serve this goal The simple powerful Racket language related to Scheme allows us to concentrate on the fundamental concepts and techniques of computer programming without being distracted by complex syntax As a result this book can be used at the high school and perhaps middle school level while providing enough advanced concepts not usually found in a first course to challenge a college student Those who have already done some programming e g in Java Python or C will enhance their understanding of the fundamentals unlearn some bad habits and change the way they think about programming We take a graphics early approach you'll start manipulating and combining graphic images from Chapter 1 and writing event driven GUI programs from Chapter 6 even before seeing arithmetic We continue using graphics GUI and game programming throughout to motivate fundamental concepts At the same time we emphasize data types testing and a concrete step by step process of problem solving After working through this book you'll be prepared to learn other programming languages and program well in them Or if this is the last programming course you ever take you'll understand many of the issues that affect the programs you use every day I have been using *Picturing Programs* with my daughter and there's no doubt that it's gentler than *HtDP* It does exactly what Stephen claims which is to move gradually from copy and change exercises to think on your own exercises within each section I also think it's nice that the worked exercises are clearly labeled as such There's something psychologically appealing about the fact that you first see an example in the text of the book and then a similar example is presented as if it were an exercise but they just happen to be

giving away the answer It is practically shouting out Here s a model of how you go about solving this class of problems pay close attention Mark Engelberg 1 Matthias team have done exceptional highly impressive work with HtDP The concepts are close to genius perhaps yes genius quality work They are a MUST for any high school offering serious introductory CS curriculum 2 Without Dr Blochs book Picturing Programs I would not have successfully implemented these concepts Dr Scheme Racket Design Recipe etc into an ordinary High School Classroom Any high school instructor who struggles to find ways to bring these great HtDP ideas to the typical high schooler should immediately investigate the Bloch book Think of it as coating the castor oil with chocolate Brett Penza Guide to Teaching Computer Science Orit Hazzan,Tami Lapidot,Noa Ragonis,2015-01-07 This textbook presents both a conceptual framework and detailed implementation guidelines for computer science CS teaching Updated with the latest teaching approaches and trends and expanded with new learning activities the content of this new edition is clearly written and structured to be applicable to all levels of CS education and for any teaching organization Features provides 110 detailed learning activities reviews curriculum and cross curriculum topics in CS explores the benefits of CS education research describes strategies for cultivating problem solving skills for assessing learning processes and for dealing with pupils misunderstandings proposes active learning based classroom teaching methods including lab based teaching discusses various types of questions that a CS instructor or trainer can use for a range of teaching situations investigates thoroughly issues of lesson planning and course design examines the first field teaching experiences gained by CS teachers *Introduction to Computing* David Evans,2011-12-07 Introduction to Computing is a comprehensive text designed for the CS0 Intro to CS course at the college level It may also be used as a primary text for the Advanced Placement Computer Science course at the high school level **West's New York Supplement** ,1995
