Successes, Limitations, and Frontiers in Ecosystem Science Michael L. Pace, Peter M. Groffman, 2013-12-01 Research on the ecosystems has emerged in recent decades as a vital successful and sometimes controversial approach to environmental science. Ecosystem science has addressed issues such as human alteration of biogeochemical cycles, ecological complexity, and biodiversity, and ecological response to climate change. As a central and integrating science, ecosystem level studies have been highly successful. This book emphasizes the idea that much of the progress in ecosystem research has been driven by the emergence of new environmental problems that could not be addressed by existing approaches. By focusing on successes, limitations, and frontiers in ecosystem studies, it will be welcomed by students and scientists throughout the ecological and environmental communities.

**Double-Diffusive Convection** Timour Radko, 2013-09-19 Double diffusive convection is a mixing process driven by the interaction of two fluid components which diffuse at different rates. Leading expert Timour Radko presents the first systematic overview of the classical theory of double diffusive convection in a coherent narrative, bringing together the disparate literature in this developing field. The book begins by exploring idealized dynamical models and illustrating key principles by examples of oceanic phenomena. Building on the theory, it then explains the dynamics of structures resulting from double diffusive instabilities, such as the little understood phenomenon of thermohaline staircases. The book also surveys non-oceanographic applications, such as industrial, astrophysical, and geological manifestations, and discusses the climatic and biological consequences of double diffusive convection. Providing a balanced blend of fundamental theory and real world examples, this is an indispensable resource for academic researchers, professionals, and graduate students in physical oceanography, fluid dynamics, applied mathematics, astrophysics, geophysics, and climatology.

**The World and the Word** Dr. Herbert L. Green Jr., 2015-11-30 Jesus' very presence on the scene as the New Testament age was unfolding, 1st century A.D., engendered opposition, created conflict, while ushering in grace. His ideas, by the accounts of many, were radical for his time, first century, and even today, in the twenty-first century. Why is this so? The NIV Archaeological Study Bible, 2005; NIV Student Bible, 2002, and on careful examination of corroborating Extra-Biblical evidence, provide a context for the Word view about Jesus. Both Bibles also support aspects of the social and physical sciences worldview in terms of cultural, socioeconomic, political, historical, archaeological, and philosophical apologetics evidence. As the pages of *The World and the Word* unfold, there is a kind of internal consistency with both the worldview, social sciences, and word view of the Bible. However, where such consistency appeared to diverge, this author attempts to filter out the noise by applying critical thinking criteria to a worldview that may not be consistent with the word view. The goal of this book, therefore, is to provide some exposition, Greek for apologia, of the Word and see how the World fits. Born-again Christians can be credible social scientists and not compromise God's Word, the Bible. Two reviewers of a draft of this book should be mentioned here: Mrs. Gradye Mattera and Mrs. Lynn Green. Their input was important, honest, and helpful in this book effort. However, in the end, they

bear no obligation for the final printed version To this I accept full responsibility After thoughtful reading of the book please send reflective comments to Dr Herb Green at hgreen48d yahoo com Use the phrase World Word 1st ed in the Subject line Thank you
