

# Chapter 24

## Magnetism

### I. Magnetic Fields

- Magnetic fields are produced by electric charges in *motion*, i.e. by *electric currents*.
- Magnetic fields exert forces on other moving electric charges (or currents) as long as the moving charges do not travel in the same (or opposite) direction as the magnetic field that is exerting the force.
- Magnetic fields do not speed up or slow down moving charges, instead, the magnetic field *deflects* the moving charges.
- The unit of magnetic field in the metric system is the *Tesla*.

### 2. Magnets

- A simple bar magnet (or horseshoe magnet) has a single “North” pole and a single “South” pole.
- In a magnet, *like poles repel* each other and *opposite poles attract*.

**Study Guide, Student Solutions Manual** John R. Gordon,1998      **From Atoms to Galaxies** Sadri Hassani,2011-06-13 College students in the United States are becoming increasingly incapable of differentiating between proven facts delivered by scientific inquiry and the speculations of pseudoscience In an effort to help stem this disturbing trend From Atoms to Galaxies A Conceptual Physics Approach to Scientific Awareness teaches heightened scientific acuity as it educates students about the physical world and gives them answers to questions large and small Written by Sadri Hassani the author of several mathematical physics textbooks this work covers the essentials of modern physics in a way that is as thorough as it is compelling and accessible Some of you might want to know How did Galileo come to think about the first law of motion Did Newton actually discover gravity by way of an apple and an accident Or maybe you have mulled over Is it possible for Santa Claus to deliver all his toys Is it possible to prove that Elvis does not visit Graceland every midnight Or perhaps you ve even wondered If ancient Taoism really parallels modern physics If psychoanalysis can actually be called a science How it is that some philosophies of science may imply that a 650 year old woman can give birth to a child No Advanced Mathematics Required A primary textbook for undergraduate students not majoring in physics From Atoms to Galaxies examines physical laws and their consequences from a conceptual perspective that requires no advanced mathematics It explains quantum physics relativity nuclear and particle physics gauge theory quantum field theory quarks and leptons and cosmology Encouraging students to subscribe to proven causation rather than dramatic speculation the book Defines the often obscured difference between science and technology discussing how this confusion taints both common culture and academic rigor Explores the various philosophies of science demonstrating how errors in our understanding of scientific principles can adversely impact scientific awareness Exposes how pseudoscience and New Age mysticism advance unproven conjectures as dangerous alternatives to proven science Based on courses taught by the author for over 15 years this textbook has been developed to raise the scientific awareness of the untrained reader who lacks a technical or mathematical background To accomplish this the book lays the foundation of the laws that govern our universe in a nontechnical way emphasizing topics that excite the mind namely those taken from modern physics and exposing the abuses made of them by the New Age gurus and other mystagogues It outlines the methods developed by physicists for the scientific investigation of nature and contrasts them with those developed by the outsiders who claim to be the owners of scientific methodology Each chapter includes essays

which use the material developed in that chapter to debunk misconceptions clarify the nature of science and explore the history of physics as it relates to the development of ideas Noting the damage incurred by confusing science and technology the book strives to help the reader to emphatically demarcate the two while clearly demonstrating that science is the only element capable of advancing technology *College Physics* Randall Dewey Knight, Brian Jones, Stuart Field, 2007

*College Physics Essentials, Eighth Edition (Two-Volume Set)* Jerry D. Wilson, Anthony J. Buffa, Bo Lou, 2022-02-28 This new edition of *College Physics Essentials* provides a streamlined update of a major textbook for algebra based physics The first volume covers topics such as mechanics heat and thermodynamics The second volume covers electricity atomic nuclear and quantum physics The authors provide emphasis on worked examples together with expanded problem sets that build from conceptual understanding to numerical solutions and real world applications to increase reader engagement Including over 900 images throughout the two volumes this textbook is highly recommended for students seeking a basic understanding of key physics concepts and how to apply them to real problems

**Theory of the Stationary Self-Consistent Universe** Avshalomov Alexander Shamilovich, Since the creation of GR and subsequent works in cosmology the question of the curvature of space in the Universe is considered one of the most important and debated to this day This is evident because the curvature of space depends whether the Universe expands contracts or is static These discussions allowed the author to propose a paradoxical idea simultaneous existence in the Universe of three interconnected space times positive negative and zero curvature and on this basis to develop a theory in which each space time plays its own role and develops in a strict accordance with its sign of curvature The three space time model of the structure of the Universe proposed by the author allows to solve many fundamental problems of modern cosmology and theoretical physics and creates the basis for building a unified physical theory including one that unites GR and quantum physics
