

**Concept-Development
Practice Page****6-1****Friction**

1. A crate filled with delicious junk food rests on a horizontal floor. Only gravity and the support force of the floor act on it, as shown by the vectors for weight W and normal force n .

- The net force on the crate is (zero) (greater than zero).
- Evidence for this is no acceleration.

2. A slight pull P is exerted on the crate, not enough to move it.

- The force of friction f acting on the crate is (less than) (equal to) (greater than) P .
- The net force on the crate is (zero) (greater than zero).

3. Pull P is increased until the crate begins to move. It is pulled so that it moves with constant velocity across the floor.

- Friction f is (less than) (equal to) (greater than) P .
- Constant velocity means acceleration is (zero) (greater than zero).
- The net force on the crate is (less than) (equal to) (greater than) zero.

4. Pull P is further increased and is now greater than friction f .

- The net force on the crate is (less than) (equal to) (greater than) zero.
- The net force acts toward the right, so acceleration acts toward the (left) (right).

- If the pulling force P is 150 N and the crate doesn't move, what is the magnitude of f ? 150 N
- If the pulling force P is 200 N and the crate doesn't move, what is the magnitude of f ? 200 N
- If the force of sliding friction is 250 N, what force is necessary to keep the crate sliding at constant velocity? 250 N
- If the mass of the crate is 50 kg and sliding friction is 250 N, what is the acceleration of the crate when the pulling force is 250 N? 0 m/s² 300 N? 1 m/s² 500 N? 5 m/s²

O'Brien,2013-01-11 This book presents a series of practical activities designed to help teachers build an effective science curriculum for more able children It focuses on developing higher order thinking skills using conceptual language directed activities relating to text for developing higher order skills and in depth study topics that emphasize a real product outcome

Teaching Undergraduate Science Linda C. Hodges,2023-07-03 This book is written for all science or engineering faculty who have ever found themselves baffled and frustrated by their undergraduate students lack of engagement and learning The author an experienced scientist faculty member and educational consultant addresses these issues with the knowledge of faculty interests constraints and day to day concerns in mind Drawing from the research on learning she offers faculty new ways to think about the struggles their science students face She then provides a range of evidence based teaching strategies that can make the time faculty spend in the classroom more productive and satisfying Linda Hodges reviews the various learning problems endemic to teaching science explains why they are so common and persistent and presents a digest of key ideas and strategies to address them based on the research she has undertaken into the literature on the cognitive sciences and education Recognizing that faculty have different views about teaching different comfort levels with alternative teaching approaches and are often pressed for time Linda Hodges takes these constraints into account by first offering a framework for thinking purposefully about course design and teaching choices and then providing a range of strategies to address very specific teaching barriers whether it be students motivation engagement in class ability to problem solve their reading comprehension or laboratory research or writing skills Except for the first and last chapters the other chapters in this book stand on their own i e can be read in any order and address a specific challenge students have in learning and doing science Each chapter summarizes the research explaining why students struggle and concludes by offering several teaching options categorized by how easy or difficult they are to implement Some for example can work in a large lecture class without a great expenditure of time others may require more preparation and a more adventurous approach to teaching Each strategy is accompanied by a table categorizing its likely impact how much time it will take in class or out and how difficult it will be to implement Like scientific research teaching works best when faculty start with a goal in mind plan an approach building on the literature use well tested methodologies and analyze results for future trials Linda Hodges message is that with such intentional thought and a bit of effort faculty can succeed in helping many more students gain exciting new skills and abilities whether those students are potential scientists or physicians or entrepreneurs Her book serves as a mini compendium of current research as well as a protocol manual a readily accessible guide to the literature the best practices known to date and a framework for thinking about teaching

Managing and Delivering Performance Bernard Marr,2009-02-04 Performance management is at the top of agendas in most government and public organizations as well as

many not for profit organizations In this follow up to his successful book Strategic Performance Management the author focuses on the unique challenges public sector organizations face when tackling the issues of strategic performance management Drawing on his extensive experience of working with numerous government public sector and not for profit organizations over the author covers The context of decision making in the public sector The significance of the use of budgeting for performance management and the impact of performance measurements on budgets A huge range of underpinning cases and examples from the public sector including cases on the Home Office and the NHS in the UK and the US Air Force For senior executives in the public sector and government and for faculty and students in the field this is the authoritative strategic level treatment of this fast growing area Harcourt Science: Physical science [grade] 6, units E and F, teacher's ed,2000 **Ate Wh** Holt Rinehart & Winston,2000 *Improving Adolescent Literacy* Douglas Fisher,Nancy Frey,2004 To help future teachers learn to infuse literacy instruction into all content areas these AUTHORs present a rich panoply of engaging instructional strategies that research has shown to be effective for improving reading and writing in middle and secondary school students After discussing common questions asked by content area teachers a full chapter is devoted to each of eight strategies anticipatory activities read alouds shared reading questioning notetaking notemaking graphic organizers vocabulary instruction writing to learn and reciprocal teaching coupling discussions with examples from the AUTHOR s own research in a diverse urban secondary school Features a common structure for presenting each strategy 1 scenario of a teacher using the strategy 2 rationale for the strategy and its supporting research and 3 descriptions of how the strategy works and authentic examples of the strategy in use Additionally in order to meet the challenge of today s inclusive multicultural classrooms the book presents only those strategies that have been proven effective with all learners including those for whom English is not their first language For future content area reading teachers *Natural Selection Theory in Non-majors' Biology* Dianne Leigh Anderson,2003 Evolution by natural selection is the dominant and unifying theme in biology yet many college students hold alternative conceptions about the topic even after completing general biology To develop effective instructional strategies and track conceptual understanding it is useful to have a detailed assessment tool easily used with large classes This study presents the Conceptual Inventory of Natural Selection CINS a distractor driven twenty item multiple choice test that assesses understanding of ten concepts related to natural selection biotic potential stable populations limited natural resources limited survival variation within a population variation inherited differential survival change in populations origin of variation and origin of species Development refinement and field testing of individual CINS items are presented and validity readability reliability and factor analysis of the CINS are described There was significant correlation between student performance on the posttest CINS and end of semester interviews suggesting that the CINS is a useful classroom tool The CINS was used as both a pretest and posttest to determine relative difficulty of the concepts among college students The three most challenging concepts were random origin of variation how populations

change over time due to changing proportions of alleles and how new species originate Many students chose distractors including need as a driving force Results support the use of non traditional methods as only students in such classes demonstrated any improvement on the CINS posttest Pre and posttesting with the CINS was also used to assess relative effectiveness of using two types of supplemental reading materials selections from narrative non textbook sources or from other general biology textbooks in a general biology course These results suggest that specific content of readings was more important than style of the readings Implications for teaching both students and pre service teachers are described

Learning Scientific Concepts Tamer G. Amin,2025-11-24 Understanding important scientific concepts like matter energy force and species is central to scientific literacy But how do we learn scientific concepts This book explains what research across distinct theoretical perspectives has taught us and then cuts through the diversity to offer a novel integrated account and a unified theory of conceptual change Theoretical perspectives from science education cognitive science developmental psychology the learning sciences and the history and philosophy of science are often seen as competing alternatives and practical pedagogical recommendations diverge sometimes even contradicting one another Learning Scientific Concepts responds by explaining and evaluating prominent theoretical perspectives the nature of concepts and conceptual development in general as understood in cognitive and developmental psychology and theory change knowledge in pieces and situated embodied distributed perspectives on science concept learning in particular It then integrates these perspectives and proposes the Unified Theory of Conceptual Change UTCC building on Susan Carey s foundational account of concepts and conceptual development in developmental psychology and Edwin Hutchins multilevel approach to analyzing cognitive systems in cognitive anthropology The UTCC outlines a comprehensive modeling toolkit for making sense of how we learn scientific concepts at different levels of analysis This book serves as a comprehensive guide for researchers advanced students and practitioners to the most important research on learning scientific concepts In proposing a novel theoretical synthesis it also suggests a way forward for researchers and offers practitioners a coherent and comprehensive story of what kind of instruction and curricular design is effective and why
