*Resources for Teaching Mathematics: 11-14* Colin Foster, 2011-09-22 This resource contains 50 ready to use mathematics lesson plans suitable for the whole department to use with learners aged 11-14. Each plan consists of a teacher's sheet which breaks down the lesson into time allocated sections from starter through to homework together with a photocopiable or downloadable student task sheet to give out. There is also a companion website with extra material to support the lesson plans in the book giving teachers the time and confidence to try new activities in the classroom with minimal preparation. The lesson tasks are open ended and encourage deep mathematical thinking allowing learners to explore different topics creatively through solving problems in their own way. This is an essential resource for any busy teacher of mathematics.

*Machine Interpretation of Line Drawings* Kōkichi Sugihara, 1986. This book solves a long standing problem in computer vision: the interpretation of line drawings and in doing so answers many of the concerns raised by this problem, particularly with regard to errors in the placement of lines and vertices in the images. Sugihara presents a computational mechanism that functionally mimics human perception in being able to generate three dimensional descriptions of objects from two dimensional line drawings. The objects considered are polyhedrons or solid objects bounded by planar faces and the line drawings are single view pictures of these objects. Sugihara's mechanism has several potential applications. It can facilitate man-machine communication by extracting object structures automatically from pictures drawn by a designer, which can be particularly useful in the computer-aided design of geometric objects such as mechanical parts and buildings. It can also be used in the intermediate stage of computer vision systems used to obtain and analyze images in the outside world. The computational mechanism itself is not accompanied by a large database but is composed of several simple procedures based on linear algebra and combinatorial theory.

**Contents:** Introduction, Candidates for Spatial Interpretation, Discrimination between Correct and Incorrect Pictures, Correctness of Hidden Part Drawn Pictures, Algebraic Structures of Line Drawings, Combinatorial Structures of Line Drawings, Overcoming Superstrictness, Algorithmic Aspects of Generic Reconstructibility, Specification of Unique Shapes, Recovery of Shape from Surface Information, Polyhedrons and Rigidity.

Kōkichi Sugihara is Professor in the Department of Mathematical Engineering and Instrumentation Physics, Faculty of Engineering, the University of Tokyo, Tokyo, Japan.
