there are differences between how the two are produced the similarities dominate the differences Of the several factors that govern the difficulty of producing software one of the most important is the level of quality to be attained as indicated by the extent to which the software performs according to expectations High quality software does what it is supposed to do almost all the time even when its users make mistakes For the purposes of this study software is classified according to four levels of quality exploratory production quality critical and secure These levels differ according to what the software is expected to do its functionality and the complexity of the conditions under which the software is expected to be used environmental complexity Exploratory software does not have to work the chief issue is speed of development Although it has uses exploratory software is not discussed in this report Production quality software needs to work reasonably well most of the time and its failures should have limited effects For example we expect our spreadsheets to work most of the time but are willing to put up with occasional crashes and even with occasional loss of data We are not willing to put up with incorrect results Critical software needs to work very well almost all of the time and certain kinds of failures must be avoided Critical software is used in trusted and safety critical applications for example medical instruments where failure of the software can have catastrophic results In producing critical software the primary worries are minimizing bugs in the software and ensuring reasonable behavior when nonmalicious users do unexpected things or when unexpected combinations of external events occur Producing critical software presents the same problems as producing production quality software but because the cost of failure is higher the standards must be higher In producing critical software the goal is to decrease risk not to decrease cost   Make Money from Home George Brand Jim Work Matthew Bear,2019-12-05 These Six Ways To Make Money From Home in 2020 Will Make You RICH Are you a nine to five employee who d like to break free and become your own boss a parent striving for work life balance a broke college student with the shadow of student debt looming over your head an aspiring entrepreneur who doesn t have a lot of capital to start with All these situations have two things in common you d like to make money without spending entire days at work because you have other important obligations such as family and education And you can t afford a high risk business model because you don t have a lot of capital to start with In your case there are two ideal solutions You can start an online business or you can invest in the stock market and become an active trader This SIX BOOK bundle will introduce you to SIX exciting business and trading opportunities Here s what you ll learn from this bundle How to start an Amazon FBA business in 60 days How to set up a successful dropshipping store and become the best dropshipper in your niche How to turn online marketing skills into actual MONEY How to apply advanced stock market strategies such as swing trading and options training How to trade on Forex and make lots of money with a small initial investment As you can see you CAN earn money from home and it doesn t have to be some shady scam Amazon FBA dropshipping and online marketing are perfectly legal and low risk business models Swing training forex trading and options trading are well established trading strategies on the stock market There is always some degree of risk on the stock
