Circle Theorems

The angle at the centre of a circle is twice the angle at the circumference of the circle from the same arc.	The angle formed in a semicircle is always a right angle.
	Angles (from the same arc) in the same segment are equal.	Opposite angles of a cyclic quadrilateral add up to 180°.
	The perpendicular line from the centre of a circle to a chord, bisects the chord.	The angle between a tangent and the radius, at the point where the tangent touches the circle, is a right angle.
	Two tangents drawn from a point to a circle are equal.	The angle between a tangent and a chord is equal to the angle at the circumference in the alternate segment.
