Constructing History 11-19 Hilary Cooper,Arthur Chapman,2009-07-09 This book describes and exemplifies strategies for teaching history across the 11 19 age range in rigorous and enjoyable ways It illustrates active learning approaches embedded in pupil led enquiries through detailed case studies which involve students in planning and carrying out historical enquiries creating accounts and presenting them to audiences in ways that develop increasingly sophisticated historical thinking The case studies took place in a number of different localities and show how practising teachers worked with pupils during each year from Y6 7 to Y 13 to initiate plan and implement enquiries and to present their findings in a variety of ways Each case study is a practical example which teachers can use as a model and modify for their own contexts showing how independent learning linked to group collaboration and peer assessment can enhance learning Social constructivist theories of learning applied to historical thinking underpin the book with particular emphasis on links between personalised and collaborative learning and e learning

The Art of Uncertainty David Spiegelhalter,2025-03-04 Named a Best Book of the Year by Forbes and The Economist From our greatest living statistical communicator Tim Harford comes an invaluable data driven guide for understanding and learning to embrace risk and uncertainty in our daily lives How dangerous is our diet How much of sports falls into the realm of luck

When authorities categorize a given event as highly likely how likely is that really Whether we re trying to decide if the benefits of a new medication are worth the chance of side effects or if artificial intelligence truly threatens humanity our lives are riddled with uncertainties both everyday and existential yet it can be difficult to know how to properly weigh all those unknowns Luckily for us renowned statistician David Spiegelhalter has spent his career dissecting data to resolve the apparently random and decode the many decisions we face with imperfect information In *The Art of Uncertainty* he shows how we can become better at dealing with what we don t know to make smarter choices in a world so full of puzzling variables In lucid lively prose Spiegelhalter guides us through the principles of probability illustrating how they can help us think more analytically about everything from medical advice to sports to climate change forecasts He demonstrates how taking a mathematical approach to phenomena we might otherwise attribute to fate or luck can help us sort hidden patterns from mere coincidences better evaluate cause and effect and predict what s likely to happen in the future Along the way we learn how a misinterpretation of a probability contributed to the infamous Bay of Pigs fiasco why a ship twice the size of the Titanic sank without a trace and why we can be so confident that no two properly shuffled decks of cards have ever been in the same order Sparkling with wit and fascinating real world examples this is an essential guide to navigating uncertainty while also retaining the humility to admit what we don t or simply cannot know
