Modeling and Optimization of Interdependent Energy Infrastructures Wei Wei, Jianhui Wang, 2019-10-22 This book opens up new ways to develop mathematical models and optimization methods for interdependent energy infrastructures ranging from the electricity network natural gas network district heating network and electrified transportation network The authors provide methods to help analyze design and operate the integrated energy system more efficiently and reliably and constitute a foundational basis for decision support tools for the next generation energy network Chapters present new operation models of the coupled energy infrastructure and the application of new methodologies including convex optimization robust optimization and equilibrium constrained optimization Four appendices provide students and researchers with helpful tutorials on advanced optimization methods Basics of Linear and Conic Programs Formulation Tricks in Integer Programming Basics of Robust Optimization Equilibrium Problems This book provides theoretical foundation and technical applications for energy system integration and the interdisciplinary research presented will be useful to readers in many fields including electrical engineering civil engineering and industrial engineering

Introduction to Nonlinear Optimization Amir Beck, 2014-10-27 This book provides the foundations of the theory of nonlinear optimization as well as some related algorithms and presents a variety of applications from diverse areas of applied sciences The author combines three pillars of optimization theoretical and algorithmic foundation familiarity with various applications and the ability to apply the theory and algorithms on actual problems and rigorously and gradually builds the connection between theory algorithms applications and implementation Readers will find more than 170 theoretical algorithmic and numerical exercises that deepen and enhance the reader's understanding of the topics The author includes offers several subjects not typically found in optimization books for example optimality conditions in sparsity constrained optimization hidden convexity and total least squares The book also offers a large number of applications discussed theoretically and algorithmically such as circle fitting Chebyshev center the Fermat Weber problem denoising clustering total least squares and orthogonal regression and theoretical and algorithmic topics demonstrated by the MATLAB toolbox CVX and a package of m files that is posted on the book's web site

Convex Optimization Stephen P. Boyd, Lieven Vandenbergh, 2004-03-08 Convex optimization problems arise frequently in many different fields This book provides a comprehensive introduction to the subject and shows in detail how such problems can be solved numerically with great efficiency The book begins with the basic elements of convex sets and functions and then describes various classes of convex optimization problems Duality and approximation techniques are then covered as are statistical estimation techniques Various geometrical problems are then presented and there is detailed discussion of unconstrained and constrained minimization problems and interior point methods The focus of the book is on recognizing convex optimization problems and then finding the most appropriate technique for solving them It contains many worked examples and homework exercises and will appeal to students researchers and practitioners in fields such as
