Different Graph Idea:

A study of plithogenic graphs: applications in spreading coronavirus disease (COVID-19) globally Fazeelat Sultana, Muhammad Gulistan, Mumtaz Ali, Naveed Yaqoob, Muhammad Khan, Tabasam Rashid, Tauseef Ahmed, 2023-01-01 During the last two decades the world has experienced three major outbreaks of Coronaviruses namely severe acute respiratory syndrome SARS CoV middle east respiratory syndrome MERS CoV and the current ongoing pandemic of severe acute respiratory syndrome 2 SARS CoV 2 The SARS CoV 2 caused the disease known as Coronavirus Disease 2019 COVID 19 Since its discovery for the first time in Wuhan China in December 2019 the disease has spread very fast and cases have been reported in more than 200 countries territories In this study the idea of Smarandache's pathogenic set is used to discuss the novel COVID 19 spread We first introduced plithogenic graphs and their subclass like plithogenic fuzzy graphs We also established certain binary operations like union join Cartesian product and composition of pathogenic fuzzy graphs which are helpful when we discuss combining two different graphs In the end we investigate the spreading trend of COVID 19 by applying the pathogenic fuzzy graphs We observe that COVID 19 is much dangerous than MERS CoV and SARS CoV Moreover as the SARS CoV and MERS CoV outbreaks were controlled there are greater chances to overcome the current pandemic of COVID 19 too Our model suggests that all the countries should stop all types of traveling movement across the borders and internally too to control the spread of COVID 19 The proposed model also predicts that in case precautionary measures have not been taken then there is a chance of severe outbreak in future *A Study on Neutrosophic Cubic Graphs with Real Life Applications in Industries* Muhammad Gulistan, Naveed Yaqoob, Zunaira Rashid, Florentin Smarandache, Hafiz Abdul Wahab, Neutrosophic cubic sets are the more generalized tool by which one can handle imprecise information in a more effective way as compared to fuzzy sets and all other versions of fuzzy sets *A Graph for All Seasons : Primary : Graphing Ideas for Primary Teachers* Cathy Sheridan, Mary Anne Cowan, Here is an easy to use resource that supports and extends any mathematics program These activities can be used to teach and reinforce graphing skills for every month of the school year Includes suggestions for different ways to make large and small graphs and weather graphing ideas 43 pages *New Approaches to Gear Design and Production* Veniamin Goldfarb, Evgenii Trubachev, Natalya Barmina, 2020-01-25 This is the third book in a series devoted to gear design and production Comprising papers by scientists and gear experts from around the globe it covers recent developments in practically all spheres of mechanical engineering related to gears and transmissions It describes advanced approaches to research design testing and production of various kinds of gears for a vast range of applications with a particular focus on advanced computer aided approaches for gear analysis simulation and design the application of new materials and tribological issues *Mindset Mathematics: Visualizing and Investigating Big Ideas, Grade 3* Jo Boaler, Jen Munson, Cathy Williams, 2018-07-31 Engage students in mathematics using growth mindset techniques The most challenging parts of teaching mathematics are engaging students and helping them understand the

connections between mathematics concepts In this volume you ll find a collection of low floor high ceiling tasks that will help you do just that by looking at the big ideas at the third grade level through visualization play and investigation During their work with tens of thousands of teachers authors Jo Boaler Jen Munson and Cathy Williams heard the same message that they want to incorporate more brain science into their math instruction but they need guidance in the techniques that work best to get across the concepts they needed to teach So the authors designed Mindset Mathematics around the principle of active student engagement with tasks that reflect the latest brain science on learning Open creative and visual math tasks have been shown to improve student test scores and more importantly change their relationship with mathematics and start believing in their own potential The tasks in Mindset Mathematics reflect the lessons from brain science that There is no such thing as a math person anyone can learn mathematics to high levels Mistakes struggle and challenge are the most important times for brain growth Speed is unimportant in mathematics Mathematics is a visual and beautiful subject and our brains want to think visually about mathematics With engaging questions open ended tasks and four color visuals that will help kids get excited about mathematics Mindset Mathematics is organized around nine big ideas which emphasize the connections within the Common Core State Standards CCSS and can be used with any current curriculum **Bridging the**

Gap Between Graph Edit Distance and Kernel Machines Michel Neuhaus, Horst Bunke, 2007 In graph based structural pattern recognition the idea is to transform patterns into graphs and perform the analysis and recognition of patterns in the graph domain commonly referred to as graph matching A large number of methods for graph matching have been proposed Graph edit distance for instance defines the dissimilarity of two graphs by the amount of distortion that is needed to transform one graph into the other and is considered one of the most flexible methods for error tolerant graph matching This book focuses on graph kernel functions that are highly tolerant towards structural errors The basic idea is to incorporate concepts from graph edit distance into kernel functions thus combining the flexibility of edit distance based graph matching with the power of kernel machines for pattern recognition The authors introduce a collection of novel graph kernels related to edit distance including diffusion kernels convolution kernels and random walk kernels From an experimental evaluation of a semi artificial line drawing data set and four real world data sets consisting of pictures microscopic images fingerprints and molecules the authors demonstrate that some of the kernel functions in conjunction with support vector machines significantly outperform traditional edit distance based nearest neighbor classifiers both in terms of classification accuracy and running time *Concept-Based Curriculum and Instruction for the Thinking Classroom* H.
