Zill, Michael R. Cullen, 2001 This variety of disciplines new Fifth Edition of Zill and Cullen's best selling book provides a thorough treatment of boundary value problems and partial differential equations This edition maintains all the features and qualities that have made Differential Equations with Boundary Value Problems popular and successful over the years Written in a straightforward readable helpful not too theoretical manner this new edition keeps the reader firmly in mind and strikes a perfect balance between the teaching of traditional content and the incorporation of evolving technology **A Transition to Mathematics with Proofs** Michael J.

Cullinane, 2013 Developed for the transition course for mathematics majors moving beyond the primarily procedural methods of their calculus courses toward a more abstract and conceptual environment found in more advanced courses A Transition to Mathematics with Proofs emphasizes mathematical rigor and helps students learn how to develop and write mathematical proofs The author takes great care to develop a text that is accessible and readable for students at all levels It addresses standard topics such as set theory number system logic relations functions and induction in at a pace appropriate for a wide range of readers Throughout early chapters students gradually become aware of the need for rigor proof and precision and mathematical ideas are motivated through examples Proof techniques and strategies are thoroughly discussed and the underlying logic behind them is made transparent Each chapter section begins with a set of guided reading questions intended to help students to identify the most significant points made within the section Practice problems are embedded within chapters so that students can actively work with a key idea that has just been introduced Each chapter also includes a collection of problems ranging in level of difficulty which are perfect for in class discussion or homework assignments 2013 **Exploring Mathematics** Craig Johnson, 2014-08 Exploring Mathematics Investigations with Functions is 354 pages intended for a one or two term course in mathematics for college students majoring in the social sciences English history music art education or any of the other majors within liberal arts The mathematics course of this scope with an algebra preregusite is a popular selection for liberal arts students This 9 chapter textbook offers modern applications of mathematics in the liberal arts as well as aesthetic features of this rich facet of history and ongoing advancement of human society With a central theme around the use of the concept of functions and the inclusion of unique topics and chapters Exploring Mathematics enables students to explore the next level of mathematics It attempts to answer the questions How does mathematics help us to better our society and understand the world around us and What are some of the unifying ideas of mathematics The central theme helps to impress upon the student the feeling that mathematics is more than a disconnected potpourri of rules and tricks Although it would be inappropriate to force a functional connection in every single section the theme is used whenever possible to provide conceptual bridges between chapters Developing the concept of a function augments the presentation of many topics in every chapter The Text's Objectives The author chose the topics based on meeting the specific NCTM curriculum standards to 1 Strengthen estimation and computational skills 2 Utilize algebraic concepts 3 Emphasize problem solving and reasoning 4 Emphasize pattern and relationship recognition 5 Highlight importance of units in measurement 6 Highlight importance of the notion of a mathematical function 7 Display mathematical Complex Analysis for Mathematics and Engineering John Mathews, Russell Howell, 2012 connections to other disciplines Intended for the undergraduate student majoring in mathematics physics or engineering the Sixth Edition of Complex Analysis for Mathematics and Engineering continues to provide a comprehensive student friendly presentation of this interesting area of mathematics.
