

# Digestive system

## Big Picture

Everything that you eat is broken down by the digestive system. The process of digestion does two things: it gathers nutrients from the food you eat, and it produces waste. Foods need to be broken down mechanically and chemically into very small molecules. These nutrient molecules are absorbed through the wall of the small intestine and transferred around the body to provide a source of energy.

## Key Terms

**Digestive System:** The organ system that breaks down food, absorbs nutrients, and eliminates any remaining waste.

**Mechanical Digestion:** The physical breakdown of chunks of food into smaller pieces. Takes place mostly in the mouth and stomach.

**Chemical Digestion:** The chemical breakdown of food into nutrient molecules. Occurs mainly in the small intestine.

**Absorption:** The process in which substances pass into the bloodstream.

**Gastrointestinal (GI) Tract:** A long tube that connects the mouth with the anus. It includes the esophagus, stomach, large and small intestines.
