Digital Communications Fundamentals And Applications 2nd Edition:

Digital Communications Bernard Sklar, 2001 CD ROM contains Educational version of System View DSP tutorial Communication system exercises **Principles of Communications** Rodger E. Ziemer, W. H. Tranter, 2002 Sections on important areas such as spread spectrum cellular communications and orthogonal frequency division multiplexing are provided Computational examples are included illustrating how to use the computer as a simulation tool thereby allowing waveforms spectra and performance curves to be generated Overviews of the necessary background in signal system probability and random process theory required for the analog and digital communications topics covered in the book

Communication Systems Harold P. E. Stern, Samy A. Mahmoud, 2004 The included CD ROM contains PowerPoint based animated presentations designed to reinforce certain examples within the book it also contains pdf files with full color versions of selected figures from the book Error Control Systems for Digital Communication and Storage Stephen B.

Wicker, 1995 For introductory graduate courses in coding for telecommunications engineering digital communications This introductory text on error control coding focuses on key implementation issues and performance analysis with applications valuable to both mathematicians and engineers **Smart Antennas with MATLAB, Second Edition** Frank

Gross, 2015-02-09 The most complete current guide to smart antenna design and performance Featuring new coverage of reconfigurable antennas vector antennas and direction finding antennas this up to date resource offers a rigorous review of the basic electromagnetic principles that drive smart antenna design and deployment Case studies and worked examples using MATLAB are provided End of chapter assignments reinforce the concepts presented Thoroughly revised to reflect recent developments and the latest technologies this is a comprehensive reference for all professionals students and researchers in the field of smart antennas Smart Antennas with MATLAB Second Edition covers Fundamentals of electromagnetic fields Antenna fundamentals Array fundamentals Principles of random variables and processes Propagation channel characteristics Angle of arrival estimation Smart antennas Direction finding Electromagnetic vector sensors Smart antenna design and optimization **Digital Communication Over Fading Channels** Marvin K. Simon, Mohamed-Slim

Alouini, 2000-08-14 A unified presentation broad coverage single volume convenience This timesaving reference provides a unified approach to the performance analysis of digital communication systems over generalized fading channels Employing alternative forms of such classical mathematical functions as the Gaussian Q function the Marcum Q function and the incomplete Gamma function the book expresses communication system error probability performance in terms of the moment generation function MGF of the fading process This MGF based approach provides the unifying backbone of the book Digital Communication over Fading Channels discusses in detail coherent differentially coherent and noncoherent communication systems as well as a large variety of fading channel models typical of communication links found in the real world Coverage also includes single and multichannel reception and in the case of the latter a large variety of diversity types For each

combination of communication type channel fading model and diversity type the average bit error rate and or symbol error rate is expressed in an easy to evaluate form Special features include Important results previously scattered over many publications now in a single volume Simplified results heretofore available only in complex forms Extremely broad coverage of topics Explores practical applications including the problem of optimum combining in the presence of co channel interference
