the aspects covered in this Symposium are included in the logo the bacteriophage genome encodes for structural proteins adhesins and effector proteins that interact with the host cell in most intricate ways to carry out their mission Life of the bacteriophage depends on the tightly regulated interplay between the phage and the host proteins This all is also true between Yersinia and the different hosts and environments it encounters during its life cycle This Symposium Proceedings volume is based on the oral and poster presentations given during the Symposium The volume has been divided into six parts covering topics such as genomics surface structures bacteriophages molecular and cellular pathogenesis molecular epidemiology and diagnostics gene regulation clinical aspects and vaccines These topics reflect righteously the present trends in the bacteriology research
