Lab Report Format Expectations

Utilize college level grammar and professional formatting when completing this worksheet. Submissions without proper formatting, all required photos or sufficient responses will be rejected. Pre-lab Questions

1. Explain the digestion that occurs in the oral cavity.
Oral digestion is also known as mechanical digestion. Mastication is the process of reducing the size of food particles in the mouth cavity. Saliva aids chemical digestion by creating the enzymes required to break down food.
2. What is the function of the liver in digestion?
The liver regulates almost all of the chemicals in the blood and excretes bile, which aids the liver's ability to eliminate waste. All the blood that exits the stomach and intestines ends up in the liver.
3. What role does the gall bladder play in digestion?
The body requires bile from the liver, which is stored in the gallbladder and discharged into the duodenum, to digest and absorb all dietary lipids and fats.
4. Why is the orientation of muscle of the stomach wall important? How does this contribute to its function?

Bio 12 Digestive System Provincial

Donald W. Linzey

Bio 12 Digestive System Provincial:

Vertebrate Biology Donald W. Linzey, 2012-02-13 Arranged logically to follow the typical course format Vertebrate Biology leaves students with a full understanding of the unique structure function and living patterns of the subphylum that includes our own species

Systems Biology and Antimicrobial Drug Resistance Vijay Soni, Saurabh Mishra, Aditya Kumar Sharma, Neha Dubey, 2024-09-18 Antimicrobial resistance AMR poses a significant threat to global public health With the emergence of new resistant strains and limited antibiotic treatment options it has become increasingly difficult to treat infections effectively This is particularly concerning for bacterial infections like *Mycobacterium tuberculosis* *Acinetobacter* spp *Staphylococcus aureus* and *Pseudomonas*

aeruginosa where only a limited number of antibiotics are available for treatment According to the US National Strategy for Combating Antibiotic Resistant Bacteria approximately 2 million Americans are infected with antibiotic resistant bacteria each year and at least 23 000 die as a result The situation is even worse in developing countries Systems biology which aims to understand the complex interactions between the different components of a biological system has emerged as a powerful tool for studying AMR By integrating data from multiple sources including genomics transcriptomics proteomics and metabolomics systems biology can provide a comprehensive view of the mechanisms underlying AMR This approach can lead to the identification of novel targets for drug development and the development of personalized treatment strategies that consider the specific characteristics of individual patients and the pathogens that infect them This Research Topic aims to explore the potential of systems biology in combating antibiotic resistance and highlight the need for further research to fully realize its clinical potential in infectious diseases
