Big Ideas Math Journal Answers:

Selected writings from the Journal of the British Columbia Association of Mathematics Teachers Egan J Chernoff, Peter Liljedahl, Sean Chorney, 2016-06-01 The teaching and learning of mathematics in British Columbia has a long and storied history. An integral part of the past 50 years, 1962-2012 of this history has been the Journal of the British Columbia Association of Mathematics Teachers. This volume, which presents ten memorable articles from each of the past five decades, that is, 50 articles from the past 50 years of the journal, provides an opportunity to share this rich history with a wide range of individuals interested in the teaching and learning of mathematics and mathematics education. Each decade begins with an introduction providing a historical context and concludes with a commentary from a prominent member of the British Columbia mathematics education community. As a result, this monograph provides a historical account as well as a contemporary view of many of the trends and issues in the teaching and learning of mathematics. This volume is meant to serve as a resource for a variety of individuals including teachers of mathematics, mathematics teacher educators, mathematics education researchers, historians, and undergraduate and graduate students. Most importantly, this volume is a celebratory retrospective on the work of the British Columbia Association of Mathematics Teachers.

Teaching Mathematics in the Visible Learning Classroom, Grades K-2 John Almarode, Douglas Fisher, Kateri Thunder, John Hattie, Nancy Frey, 2019-01-09 Select the right task at the right time for the right phase of learning. Young students come to elementary classrooms with different background knowledge, levels of readiness, and learning needs. What works best to help K-2 students develop the tools to become visible learners in mathematics? What works best for K-2 mathematics learning at the surface, deep, and transfer levels? In this sequel to the megawatt bestseller *Visible Learning for Mathematics*, John Almarode, Douglas Fisher, Kateri Thunder, John Hattie, and Nancy Frey help you answer those questions by showing how Visible Learning strategies look in action in K-2 mathematics classrooms. Walk in the shoes of teachers as they mix and match the strategies, tasks, and assessments seminal to making conceptual understanding, procedural knowledge, and the application of mathematical concepts and thinking skills visible to young students as well as to you. Using grade-level examples and a decision-making matrix, you will learn to articulate clear learning intentions and success criteria at surface, deep, and transfer levels. Employ evidence to guide students along the path of becoming metacognitive and self-directed mathematics achievers. Use formative assessments to track what students understand, what they don't, and why. Select the right task for the conceptual, procedural, or application emphasis you want, ensuring the task is for the right phase of learning. Adjust the difficulty and complexity of any task to meet the needs of all learners. It's not only what works but when. Exemplary lessons, video clips, and online resources help you leverage the most effective teaching practices at the most effective time to meet the surface, deep, and transfer learning needs of every K-2 student.
