PRESCRIPTIVE RESIDENTIAL DECK CONSTRUCTION GUIDE

Based on the 2009 International Residential Code

BP-68

Where applicable, provisions and details contained in this document are based on the International Residential Code (IRC) [bracketed text references applicable sections of the IRC]. Deck structural failures result in the largest numbers of injuries and fatalities of all residential building failures. Railings and deck connections to the house are leading areas of failure. Experience has shown that wrapping beams and other non-preservative treated structural deck members with finish materials, may lead to accelerated deterioration of these members due to moisture retention. Proper techniques must be used to prevent moisture build-up. This handout suggests some methods to achieve safer deck construction and may assist in the design of specific deck plans. This design assistance sheet is intended to provide some basics of private residential deck construction. Additional information can be found at libraries, home improvement stores, and building departments.

Please note that while every effort is made to assure the accuracy of the information contained in this brochure it is not warranted for accuracy. This document is not intended to address all aspects or regulatory requirements for a project and should serve as a starting point for your investigation.

Frank Stanton, 1969* **Building Construction: Principles, Materials and Systems** Charles

Bale, 2021-11-16. The process of constructing an infrastructure or building is known as construction. It deals with the planning, designing and financing of the construction project. The various sectors into which construction can be classified are buildings, infrastructure and industrial. The construction of buildings is divided further into commercial or institutional buildings and residential buildings. Some of the steps which are a part of the process of constructing buildings are developing floor plans, excavating the foundation and building the main load-bearing structure. Finally, there is an interrelation and overlap of different fields in order to ensure that the building is structurally sound, financially possible to build and fulfill the legal requirements. This book provides significant information of this discipline to help develop a good understanding of building construction and related fields. Those in search of information to further their knowledge will be greatly assisted by this book. **Handbook of Building Construction** George A. Hool, Nathan C.
