

## Chapter 7

### Polygons

A **polygon** can be described by two conditions:

1. No two segments with a common endpoint are collinear.
2. Each segment intersects exactly two other segments, but only on the endpoints.

A **convex polygon** is a polygon such that no line containing a side of the polygon will contain a point in the interior of the polygon.

*convex polygon*

*concave polygon*

Notice, if I extend a side (dashed line) on the right polygon, the line contains interior points. Therefore it is not a convex polygon, it is called a **concave** polygon.

What's the sum of the interior angles of a quadrilateral? a pentagon? an octagon?

The answer is, I just don't know. But ..., if I draw some pictures, that might help me discover the answer.

*quadrilateral*

*pentagon*

*Developing Mathematical Thinking* Jonathan D. Katz, 2014-07-07 In this country we have done a poor job of helping students come to see the wonder beauty and power of mathematics Standards can be brought into the picture but unless we think about what it means to truly engage students in mathematics we will continue to be unsuccessful The goal of this book is to begin to change the way students experience mathematics in the middle and high school classrooms In this book you will find a theoretical basis for this approach to teaching mathematics multiple guides and questions for teachers to think about in relation to their everyday teaching and over 30 examples of problems lessons tasks and projects that been used effectively with urban students

International Perspectives on the Teaching and Learning of Geometry in Secondary Schools Patricio Herbst, Ui Hock Cheah, Philippe R. Richard, Keith Jones, 2018-04-27 This book presents current perspectives on theoretical and empirical issues related to the teaching and learning of geometry at secondary schools It contains chapters contributing to three main areas A first set of chapters examines mathematical epistemological and curricular perspectives A second set of chapters presents studies on geometry instruction and teacher knowledge and a third set of chapters offers studies on geometry thinking and learning Specific research topics addressed also include teaching practice learning trajectories learning difficulties technological resources instructional design assessments textbook analyses and teacher education in geometry Geometry remains an essential and critical topic in school mathematics As they learn geometry students develop essential mathematical thinking and visualization skills and learn a language that helps them relate to and interact with the physical world Geometry has traditionally been included as a subject of study in secondary mathematics curricula but it has also featured as a resource in out of school problem solving and has been connected to various human activities such as sports games and artwork Furthermore geometry often plays a role in teacher preparation undergraduate mathematics and at the workplace New technologies including dynamic geometry software computer assisted design software and geometric positioning systems have provided more resources for teachers to design environments and tasks in which students can learn and use geometry In this context research on the teaching and learning of geometry will continue to be a key element on the research agendas of mathematics educators as researchers continue to look for ways to enhance student learning and to understand student thinking and teachers decision making
