

Keywords: Active Transport, Osmosis, Diffusion, villi, stomata, root hair cell

Human Kidney

Vital for homeostasis

Works by filtering everything from blood and then reabsorbing all the sugar, as well as the mineral ions and water needed.

Active transport ensures ALL sugar is reabsorbed and diffusion makes sure mineral ions and water is reabsorbed in the right amounts

Hot day with little water intake = little urine (concentrated)

Cold day with large water intake = lots of urine (dilute)

Dialysis	Transplant
- Much more readily available - Enables you to lead relatively normal life - No risk of rejection - No need for medicine	- Eat what you like - Lead a normal life - Free from restrictions which come with regular dialysis sessions

The Intestine

VILLI: tiny protrusions in the intestine which help to absorb the products of digestion

Use active transport + diffusion to gain as much of the valuable materials, especially sugar, as possible

Villi help increase absorption because they:

Have a large surface area (squashed up)

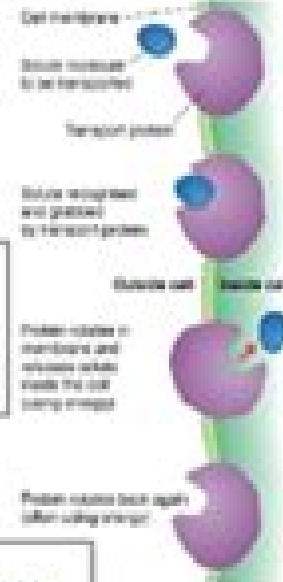

Are moist

Are very close to a large network of capillaries (absorbed straight into blood stream)

Active Transport

Active Transport requires energy to transport molecules from low to a high concentration

B3) Biology

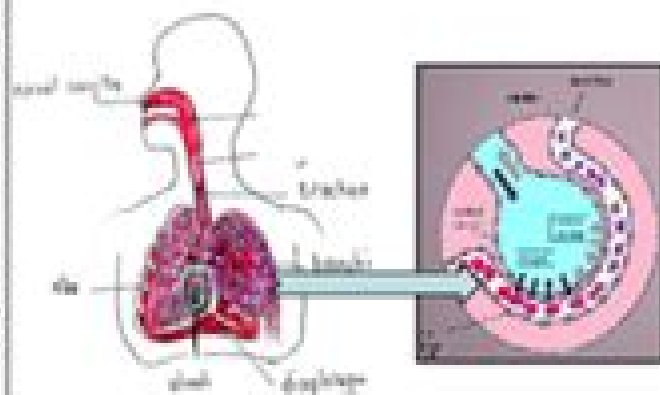

Transpiration is the loss of water by evaporation from plants.

Plants lose water when they open the stomata in the leaves to let in carbon dioxide.

Transpiration happens faster in hot, dry, windy conditions.

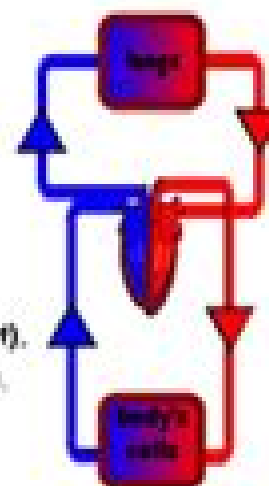

The Breathing System:

- Takes air into and out of your body.
- O₂ diffuses into your bloodstream and CO₂ diffuses out.
- Alveoli: large surface area, moist, thin walls.

The Circulatory System:

- The body transport system consists of blood vessels, the heart and blood.
- Humans beings have a double circulation.
- the heart works as a pump moving blood around the body.
- the 3 main types of blood vessel are the Arteries (Away from heart), veins (Into heart) and capillaries.

The Blood

WHITE BLOOD CELLS- fights
PLATELETS- help blood to clot
PLASMA- holds dissolved substances, glucose (taken from the small intestine to the body organs), CO₂, waste products (urea from the kidneys)
RED BLOOD CELLS- No nucleus- more room for Haemoglobin
 Special shape with a lowered Centre- greater surface area to absorb gas
HAEMOGLOBIN- substance which gains oxygen from the lungs to form OXyhaemoglobin. Then releases oxygen into cells.
