

The eye is a sensory receptor that detects light and sends electrical impulses to the brain.

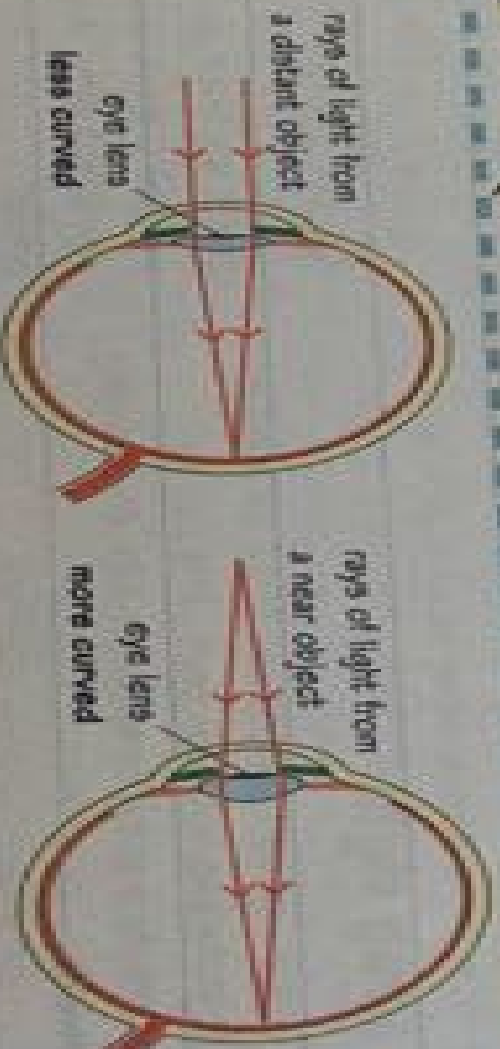

## parts of the eye

Light enters the eye through a hole called the pupil. The cornea and the lens focus the light to form a sharp image on the retina. The retina contains special receptor cells called rods and cones that detect the light and form an image. The nerves in the retina convert the image into electrical signals that are sent to the brain along the optic nerve.

## Focusing the image

The eye lens changes shape to produce a sharp image on the retina.

| Object | Ciliary muscles | Suspensory ligaments | Shape of lens      |
|--------|-----------------|----------------------|--------------------|
| near   | contracted      | slack                | fat and rounded    |
| far    | relaxed         | tight                | thin and flattened |
