education **Leading Learning for Digital Natives** Rebecca J. Blink, 2015-10-23 In light of rapid advances in technology and changes in students learning styles Leading Learning for Digital Natives offers much needed new tools for guiding effective instruction in the classroom By offering practical strategies for gathering data with technology tools this book helps school leaders embrace data and technology to develop the classroom and instructional practices that students need today Blink's practical and accessible tips make it easy for teachers and leaders to use technology and data to engage students and increase student achievement Focusing coverage on the latest technology tools this book will help you lead a school that personalizes instruction and learning through Integration of data Real time instruction Setting expectations and outcomes to align with new state standards Integration of technology tools and blended pedagogy Learning Mathematics Successfully Clark J Hickman, Helene J. Sherman, 2019-09-01 The goal of this book is to bring together the concept of self efficacy theory with practical how to strategies for both teachers and parents to use in heightening their students levels of self efficacy The book examines how self efficacy theory relates to the acquisition of mathematical competence The text also provides specific and practical how to strategies for both teachers and parents in applying these principles to classroom mathematics instruction and activities The self efficacy practices and applications to mathematics are also suitable for families working with learners outside the school environment Acquiring mathematical skills requires more than knowing arithmetic tables memorizing rules and knowing proofs It requires a basic belief that one is capable of obtaining this information making sense of it and applying and generalizing it in mathematical problems In addition a student must believe that obtaining these skills leads to a positive outcome whether it is perceived to be a good or passing grade comfort level in tackling mathematical problems being able to advance to the next mathematics course being able to score highly on the math section of the SAT and or be competitive for a desired job The ability of students to achieve and exceed grade level competence in mathematics is addressed through the lens of Albert Bandura's Self Efficacy Theory This theoretical position states that one will persist in mastering a behavior in this case mastering mathematical principles and skills in the face of obstacles or failures to the extent that one believes he or she has the ability to do so and that there is a desired outcome for doing so The research literature on the role of self efficacy in mathematic instruction is examined to demonstrate the validity of using this concept to increase student and parent teacher confidence in learning and applying grade appropriate math content Specific teaching methodologies will be provided that infuse self efficacy strategies for students Lastly teachers and parents are provided strategies to increase their own self efficacy when it comes to conveying mathematics principles to their child or student as well as strategies to assess their students level of self efficacy over time Teaching and learning mathematics so that students achieve success at their grade level or above can present a variety of challenges One barrier that affects learners is the belief that one is not capable of learning mathematics or not naturally talented in the field not a math person As a result learners may not believe they are capable of a positive outcome for achieving mathematics success This book is an important resource

for pre service and in service teachers as well as families in applying the theory of self efficacy to support learners in becoming confident and assured in their ability to understand and apply mathematical principles and procedures Coupled with classroom ready mathematics instructional strategies the book provides readers with the background tools and strategies needed to carry content success and confidence forward to remain persistent in solving all future mathematical problems

s Developmental Math students enter college needing more than just the math and this has directly impacted the instructor's role in the classroom. Instructors have to teach to different learning styles within multiple teaching environments and to a student population that is mostly unfamiliar with how to be a successful college student. Authors Andrea Hendricks and Pauline Chow have noticed this growing trend in their combined 30 years of teaching at their respective community colleges both in their face to face and online courses. As a result they set out to create course materials that help today's students not only learn the mathematical concepts but also build life skills for future success. Understanding the time constraints for instructors these authors have worked to integrate success strategies into both the print and digital materials so that there is no sacrifice of time spent on the math. Furthermore, Andrea and Pauline have taken the time to write purposeful examples and exercises that are student centered, relevant to today's students, and guide students to practice critical thinking skills.

Elementary and Intermediate Algebra Marvin L. Bittinger, David Ellenbogen, Barbara Johnson, 2017. For courses in elementary and intermediate algebra. Objective: Visualizing the Concepts. One of the hallmarks of the Bittinger Developmental Math program is objective based learning. In *Elementary and Intermediate Algebra: Graphs and Models, Fifth Edition*, the authors place special emphasis on conceptual understanding, modeling, and visualization. Their goal is to help students see the math and learn algebra by making connections between the math and real world applications. For the Fifth Edition, the authors have made many updates to the text and applications, as well as to the accompanying resources. These include important enhancements to the MyMathLab course: new Active Learning Figures and the creation of a new interactive video program, To the Point Objective Videos, associated with a new student workbook, MyMathGuide: Notes, Practice, and Video Path. Also available with MyMathLab, MyMathLab is an online homework, tutorial, and assessment program designed to work with this text to engage students and improve results. Within its structured environment, students practice what they learn, test their understanding, and pursue a personalized study plan that helps them absorb course material and understand difficult concepts. The text and MyMathLab course form a tightly integrated program with all new To the Point Objective Videos, Active Learning Figures, and
