step towards a connection between certain different disciplines involved in education The gap between neurochemistry cognitive science neurobiology and other rapidly developing disciplines on one side and education as part of social sciences on the other currently appears to be great and even unbridgeable except by analogy metonymy and metaphor From the experiences of recent years it seems clear that the existing educational system as a whole is perceived as an ailing system that fails to meet the needs of a major portion of the society it serves This book brings to attention a form of learning that transcends logic and rhetorical appeal It defines appropriate architecture on the basis of cognitive science and methods of artificial intelligence taking into account that a school system is a dynamical system which follows the dynamical systems theory The volume shows how to build an intelligent tutoring system and an intelligent teaching learning system upon it Through the use of intelligent tutoring systems students are placed in an active role as opposed to the passive role that they more or less have today
