Kornhuber, 2012-12-06 The details of the receptor mechanism are not yet fully understood for any sensory system However sufficient data are available for the vestibular system and for other systems to permit meaningful tracking of the sensory messages through the nervous system and via conscious experience The reception process ing storage and output of information in man and other animals as done by means of receptors neurons secretory cells and muscle fibers are collectively referred to as mind Sensory physiologists tend to disbelieve in extrasensory perception Sensory physiology in general is an area upon which different sciences and methods converge Anatomists physiologists psychologists physicists chemists and engineers have made important contributions to sensory physiology What is special about vestibular physiology is the fact that many research workers are clinicians living under the constant pressure of their patient s demands This is a disadvantage when it comes to writing handbooks but an advantage for the pa tient since research is guided by clinical practice and can be quickly applied Modern methods such as recording from single nerve units and the correlation of electrophysiological and psychophysical data have greatly contributed to our knowledge yet the study of lesions is still important especially in the vestibular field
