**Drawing and Reinventing Landscape** Diana Balmori, 2014-12-05 How to tackle representation in landscape design Representation is a hot topic in landscape architecture While computerization has been a catalyst for change across many fields in design no other design field has experienced such drastic reinvention as has landscape architecture As the world urbanizes rapidly and our relationship with nature changes it is vitally important that landscape designers adopt innovative forms of representation whether digital analog or hybrid In this book author Diana Balmori explores notions of representation in the discipline at large and across time She takes readers from landscape design's roots in seventeenth century France and eighteenth century England through to modern attempts at representation made by contemporary landscape artists Addresses a central topic in the discipline of landscape architecture Features historic works and those by leading contemporary practitioners such as Bernard Lassus Richard Haag Stig L Andersson Lawrence Halprin and Patricia Johanson Written by a renowned practitioner and educator Features 150 full color images Drawing and Reinventing Landscape AD Primer is an informative investigation of beauty in landscape design offering inspiring creative perspectives for students and professionals

*Touching the City* Timothy Makower, 2014-11-24 Scale in cities is relative and absolute It has the ability to make us feel at home in the world or alien from it connected or disconnected Both large and small scale in cities can be beautiful both are right neither is wrong Whilst accepting that prescription is no answer getting the scale right at an intuitive and sensual level is a fundamental part of the magic of architecture and urban design Touching the City explores how scale is manifested in cities exploring scale in buildings in the space between them and in their details It asks how scale makes a difference Travelling from Detroit to Chandigarh via New York London Paris Rome and Doha Tim Makower explores cities with the analytical eye of a designer and with the experiential eye of the urban dweller Looking at historic cities he asks what is good about them what can we learn from the old to inform the new The book zooms in from the macro scale of surfing Google Earth to micro moments such as finding fossils in a weathered wall It examines the dynamics and movement patterns of cities the making of streets and skylines the formation of thresholds and facades and it also touches on the process of design and the importance of drawing As the book's title Touching the City suggests it also emphasises the tactile that the city is indeed something physical something we can touch and be touched by alive and ever changing

Smart Cities Antoine Picon, 2015-11-16 As cities compete globally the Smart City has been touted as the important new strategic driver for regeneration and growth Smart Cities are employing information and communication technologies in the quest for sustainable economic development and the fostering of new forms of collective life This has made the Smart City an essential focus for engineers architects urban designers urban planners and politicians as well as businesses such as CISCO IBM and Siemens Despite its broad appeal few comprehensive books have been devoted to the subject so far and even fewer have tried to relate it to cultural issues and to assume a truly critical stance by trying to

decipher its consequences on urban space and experience This cultural and critical lens is all the more important as the Smart City is as much an ideal permeated by Utopian beliefs as a concrete process of urban transformation This ideal possesses a strong self fulfilling character our cities will become Smart because we want them to This book opens with an examination of the technological reality on which Smart Cities are built from the chips and sensors that enable us to monitor what happens within the infrastructure to the smartphones that connect individuals Through these technologies the urban space appears as activated almost sentient This activation generates two contrasting visions on the one hand a neo cybernetic ambition to steer the city in the most efficient way and on the other a more bottom up participative approach in which empowered individuals invent new modes of cooperation A thorough analysis of these two trends reveals them to be complementary The Smart City of the near future will result from their mutual adjustment In this process urban space plays a decisive role Smart Cities are contemporary with a spatial turn of the digital Based on key technological developments like geo localisation and augmented reality the rising importance of space explains the strategic role of mapping in the evolution of the urban experience Throughout this exploration of some of the key dimensions of the Smart City this book constantly moves from the technological to the spatial as well as from a critical assessment of existing experiments to speculations on the rise of a new form of collective intelligence In the future cities will become smarter in a much more literal way than what is often currently assumed
