**Journal of Industrial and Engineering Chemistry** ,1920 *Methods for Affinity-Based Separations of Enzymes and Proteins* Munishwar N. Gupta, 2002-04-01 One major concern of biotechnology is either using enzymes or producing them Enzyme protein production is therefore an important starting point for biotechnology Bioseparation or Downstream Processing constitutes about 40 90% of the total production cost Driven by economics highly selective technologies applicable to large scale processing have emerged during the last

decade These technologies are slowly diffusing to enzymologists who are working on a smaller scale looking for fast and efficient purification protocols The affinity based techniques including precipitation two phase extractions expanded bed chromatography perfusion chromatography and monoliths described in this volume provide current and new cutting edge methods Consequently the book is of main interest to researchers in biochemistry biochemical engineering and biotechnology working either in academic or industrial sectors

### **Superresolution Optical Microscopy** Barry R.

Masters,2020-03-21 This book presents a comprehensive and coherent summary of techniques for enhancing the resolution and image contrast provided by far field optical microscopes It takes a critical look at the body of knowledge that comprises optical microscopy compares and contrasts the various instruments provides a clear discussion of the physical principles that underpin these techniques and describes advances in science and medicine for which superresolution microscopes are required and are making major contributions The text fills significant gaps that exist in other works on superresolution imaging firstly by placing a new emphasis on the specimen a critical component of the microscope setup giving equal importance to the enhancement of both resolution and contrast Secondly it covers several topics not typically discussed in depth such as Bessel and Airy beams the physics of the spiral phase plate vortex beams and singular optics photoactivated localization microscopy PALM stochastic optical reconstruction microscopy STORM structured illumination microscopy SIM and light sheet fluorescence microscopy LSFM Several variants of these techniques are critically discussed Noise optical aberrations specimen damage and artifacts in microscopy are also covered The importance of validation of superresolution images with electron microscopy is stressed Additionally the book includes translations and discussion of seminal papers by Abbe and Helmholtz that proved to be pedagogically relevant as well as historically significant This book is written for students researchers and engineers in the life sciences medicine biological engineering and materials science who plan to work with or already are working with superresolution light microscopes The volume can serve as a reference for these areas while a selected set of individual chapters can be used as a textbook for a one semester undergraduate or first year graduate course on superresolution microscopy Moreover the text provides a captivating account of curiosity skepticism risk taking innovation and creativity in science and technology Good scientific practice is emphasized throughout and the author's lecture slides on responsible conduct of research are included as an online resource which will be of interest to students course instructors and scientists alike
