Online Student Teacher's Guide

The purpose of this guide is to help you understand the concepts of color vision and how they relate to the human eye and brain. This guide is designed for use by student teachers and is intended to be a resource for you as you prepare to teach color vision in your classroom.

The guide is divided into two main sections: **Color Vision** and **Color Blindness**. The **Color Vision** section discusses the basic principles of color vision, including the role of the eye and brain in perceiving color. The **Color Blindness** section discusses the various types of color blindness and how they affect the ability to see certain colors.

The guide includes a variety of activities and resources to help you learn about color vision. These include a **Color Vision Test**, a **Color Vision Worksheet**, and a **Color Vision Quiz**. The **Color Vision Test** is a series of questions that assess your understanding of color vision. The **Color Vision Worksheet** is a series of activities that help you explore the concepts of color vision. The **Color Vision Quiz** is a series of multiple-choice questions that test your knowledge of color vision.

The guide also includes a **Color Vision Glossary** and a **Color Vision Bibliography**. The **Color Vision Glossary** defines the key terms used in the guide. The **Color Vision Bibliography** lists the sources used in the guide.

The guide is intended to be a resource for you as you prepare to teach color vision in your classroom. It is designed to be used in conjunction with the **Color Vision** PhET simulation.

Additive Color Mixing

Additive color mixing is the process of combining different colors of light to create new colors. This process is based on the fact that the human eye has three types of color receptors: red, green, and blue. When these three colors are combined in different proportions, they can create all the colors that the human eye can see.

Subtractive Color Mixing

Subtractive color mixing is the process of combining different colors of paint or ink to create new colors. This process is based on the fact that the human eye has three types of color receptors: red, green, and blue. When these three colors are combined in different proportions, they can create all the colors that the human eye can see.
