Janakarajan, 2018-11-01. When it comes to water we flush and forget. We use, abuse and almost never recycle. Water sector in India since the 1990s has seen some new ideas formalised legally and institutionally while others are still emerging and evolving. Confronting the reality of current water management strategies, this volume discusses the state of the Indian water sector to uncover solutions that can address the imminent water crises. This book analyses the growing water insecurity, increase in demand, inefficiency in water use and growing inequalities in accessing clean water. Sheds light on water footprint in agricultural, industrial and urban use, pressures on river basin management, depleting groundwater resources, patterns of droughts and floods, watershed based development and waste water and sanitation management. Examines water conflicts, lack of participatory governance mechanisms and suggests an alternative framework for water regulation and conflict transformation. Highlights the relationship between gender discourse and water governance. Presents an alternative agenda for water sector reforms. This volume, with hopes for a more water secure future, will interest scholars and researchers of development studies, environment studies, public policy, political studies, political sociology and NGOs, media and think tanks working in this area. **Application of Low Cost Ceramic Membranes in Wastewater Treatment** Sibdas

Bandyopadhyay, 2025-05-01. This book reviews the status of developing tailor made low cost membranes and membrane based separation processes for applications in wastewater treatment. It also presents an overview of industry specific case studies upholding the waste to resource strategy for utilization of low cost ceramic membranes in industrial wastewater treatment. This book highlights methods, results and examples demonstrating that low cost ceramic membranes possess similar features and advantages comparable to the commercially available ceramic membranes, thereby minimizing the prohibitive cost of their usage in wastewater treatment. Thus, the readers who are looking for more economical alternatives for wastewater treatment can be introduced with the cheaper membrane materials. It also discusses the selection and method of application of such membranes in the treatment processes. This book can serve as a valuable reference for researchers and professionals interested in wastewater treatment and allied fields.
