Price Index Concepts and Measurement W. Erwin Diewert, John Greenlees, Charles R. Hulten, 2010-02-15 Although inflation is much feared for its negative effects on the economy how to measure it is a matter of considerable debate that has important implications for interest rates monetary supply and investment and spending decisions Underlying many of these issues is the concept of the Cost of Living Index COLI and its controversial role as the methodological foundation for the Consumer Price Index CPI Price Index Concepts and Measurements brings together leading experts to address the many questions involved in conceptualizing and measuring inflation They evaluate the accuracy of COLI a Cost of Goods Index and a variety of other methodological frameworks as the bases for consumer price construction

Statistical Office of the European Communities, 2009-02-03 The consumer price index CPI measures the rate at which the prices of consumer goods and services are changing over time It is a key statistic for economic and social policymaking and has substantial and wide ranging implications for governments businesses and households This important and comprehensive

Price Statistics Compilation in 196 Economies: The Relevance for Policy Analysis Francien Berry, Brian Graf, Mr. Michael Stanger, Mari Ylä-Jarkko, 2019-07-26 The consumer price index CPI is a key economic indicator used to gauge inflation, adjust wages, pensions and social benefits. The producer prices index PPI is used for forecasting and deflating GDP estimates. Both indexes are used by the Fund policymakers and researchers for global, regional and domestic surveillance. In this context, the paper evaluates the soundness of the indexes by assessing four major criteria: frequency of updating the weights, the index coverage, timeliness and the use of international classifications. We discuss online and scanner data as frontier issues. The study shows that the CPI is universally and frequently compiled, timely and fairly well aligned with international standards. However, the weights used to compile the index are updated in only 45 percent of economies and have national coverage in 76 percent. PPIs compiled by only 126 economies are timely, but there is scope for continued improvement as only 36 percent of economies have updated PPI weights and approximately 67 percent maintain the recommended coverage. Outdated weights impact the reliability of the indexes for policy analysis. Frequently updated weights and well represented coverage mitigate against biases and ensure that the indexes properly measure the price evolution in the economy.
