

Different Components in IDT while Designing a Universe

An OLAP or a Relational connection to data source

- Extracting the tables and joins from Relational database or an OLAP cube.
- Building a data foundation from extracted tables and joins.
- Creating metadata objects from data foundation layer and these objects are managed in Business layer.
- Using Universe parameters and to share the resources in Universe.
- Publishing a Universe which includes Business layer, Data Foundation and a Universe connection to database

Universe can be published to the central repository to be used by other SAP Business Objects reporting applications.

Security profiles are used to provide access on Universe data and metadata objects.
