with dd The fourth and final module examines spoofed email messages This module looks at the RFCs for email describes how email messages are spoofed and presents some techniques for identifying and tracing spoofed email Our focus is to provide system and network administrators with advanced methodologies tools and procedures for applying sound computer forensics best practices when performing routine log file reviews network alert verifications and other routine interactions with systems and networks The final goal is to create trained system and network professionals who are able to understand the fundamentals of computer forensics so that in the normal course of their duties they can safely preserve technical information related to network alerts and other security issues
