Perceptual Issues in Visualization Georges Grinstein,Haim

Levkowitz,2013-03-07 With the increase in the amount and dimensionality of scientific data collected new approaches to the design of displays of such data have become essential The designers of visual and auditory displays of scientific data seek to harness perceptual processes for data exploration The general aim is to provide ways for raw data and the statistical and mathematical structures they comprise to speak for themselves and thereby enable scientists to conduct exploratory in addition to confirmatory analyses of their data The present primary approach via visualization depends mainly on coding data as positions of visually distinguishable elements in a two or three dimensional euclidean space e g as discrete points comprising clusters in scatter plot displays and as patches comprising the hills and valleys of statistical surfaces These displays are immensely effective because the data are in a form that evokes natural perceptual processing of the data into impressions of the presence and spatial disposition of apparent materials objects and structures in the viewers apparent physical environment The problem with this mode of display however is that its perceptual potency is largely exhausted at dimension three while we increasingly face the need to explore data of much greater dimensionality The challenge posed for visualization researchers is to develop new modes of display that can push the dimensionality of data displays higher while retaining the kind of perceptual potency needed for data exploration

Pascal Programming for Music Research Alexander

R. Brinkman,1990-06-26 Pascal Programming for Music Research addresses those who wish to develop the programming skills necessary for doing computer assisted music research particularly in the fields of music theory and musicology Many of the programming techniques are also applicable to computer assisted instruction CAI composition and music synthesis The programs and techniques can be implemented on personal computers or larger computer systems using standard Pascal compilers and will be valuable to anyone in the humanities creating data bases Among its useful features are complete programs from simple illustrations to substantial applications beginning programming through such advanced topics as linked data structures recursive algorithms DARMS translation score processing bibliographic references at the end of each chapter to pertinent sources in music theory computer science and computer applications in music exercises which explore and extend topics discussed in the text appendices which include a DARMS translator and a library of procedures for building and manipulating a linked representation of scores most algorithms and techniques that are given in Pascal programming translate easily to other computer languages Beginning as well as advanced programmers and anyone interested in programming music applications will find this book to be an invaluable resource
