Computational Modeling Of Human Language Acquisition Afra Alishahi:

Computational Modeling of Human Language Acquisition Afra Alishahi,2011 In doing so computational modeling provides insight into the plausible mechanisms involved in human language acquisition and inspires the development of better language models and techniques This book provides an overview of the main research quesetions in the field of human language acquisition It reviews the most commonly used computational frameworks methodologies and resources for modeling child language learning and the evaluation techniques used for assessing these computational models The book is aimed at cognitive scientists who want to become familiar with the available computational methods for investigating problems related to human language acquisition as well as computational linguists who are interested in applying their skills to the study of child language acquisition   Cognitive Aspects of Computational Language Acquisition Aline Villavicencio,Thierry Poibeau,Anna Korhonen,Afra Alishahi,2013-01-11 Questions related to language acquisition have been of interest for many centuries as children seem to acquire a sophisticated capacity for processing language with apparent ease in the face of ambiguity noise and uncertainty However with recent advances in technology and cognitive related research it is now possible to conduct large scale computational investigations of these issues The book discusses some of the latest theoretical and practical developments in the areas involved including computational models for language tasks tools and resources that help to approximate the linguistic environment available to children during acquisition and discussions of challenging aspects of language that children have to master This is a much needed collection that provides a cross section of recent multidisciplinary research on the computational modeling of language acquisition It is targeted at anyone interested in the relevance of computational techniques for understanding language acquisition Readers of this book will be introduced to some of the latest approaches to these tasks including Models of acquisition of various types of linguistic information from words to syntax and semantics and their relevance to research on human language acquisition Analysis of linguistic and contextual factors that influence acquisition Resources and tools for investigating these tasks Each chapter is presented in a self contained manner providing a detailed description of the relevant aspects related to research on language acquisition and includes illustrations and tables to complement these in depth discussions Though there are no formal prerequisites some familiarity with the basic concepts of human and computational language acquisition is beneficial   *Discourse Processing* Manfred Stede,2022-06-01 Discourse Processing here is framed as marking up a text with structural descriptions on several levels which can serve to support many language processing or text mining tasks We first explore some ways of assigning structure on the document level the logical document structure as determined by the layout of the text its genre specific content structure and its breakdown into topical segments Then the focus moves to phenomena of local coherence We introduce the problem of coreference and look at methods for building chains of coreferring entities in the text Next the notion of coherence relation is introduced as the second important factor of local coherence We study the role of connectives

and other means of signaling such relations in text and then return to the level of larger textual units where tree or graph structures can be ascribed by recursively assigning coherence relations Taken together these descriptions can inform text summarization information extraction discourse aware sentiment analysis question answering and the like Table of Contents Introduction Large Discourse Units and Topics Coreference Resolution Small Discourse Units and Coherence Relations Summary Text Structure on Multiple Interacting Levels *Finite-State Text Processing* Kyle Gorman,Richard Sproat,2022-06-01 Weighted finite state transducers WFSTs are commonly used by engineers and computational linguists for processing and generating speech and text This book first provides a detailed introduction to this formalism It then introduces Pynini a Python library for compiling finite state grammars and for combining optimizing applying and searching finite state transducers This book illustrates this library s conventions and use with a series of case studies These include the compilation and application of context dependent rewrite rules the construction of morphological analyzers and generators and text generation and processing applications **Sentiment Analysis and Opinion Mining** Bing Liu,2022-05-31 Sentiment analysis and opinion mining is the field of study that analyzes people s opinions sentiments evaluations attitudes and emotions from written language It is one of the most active research areas in natural language processing and is also widely studied in data mining Web mining and text mining In fact this research has spread outside of computer science to the management sciences and social sciences due to its importance to business and society as a whole The growing importance of sentiment analysis coincides with the growth of social media such as reviews forum discussions blogs micro blogs Twitter and social networks For the first time in human history we now have a huge volume of opinionated data recorded in digital form for analysis Sentiment analysis systems are being applied in almost every business and social domain because opinions are central to almost all human activities and are key influencers of our behaviors Our beliefs and perceptions of reality and the choices we make are largely conditioned on how others see and evaluate the world For this reason when we need to make a decision we often seek out the opinions of others This is true not only for individuals but also for organizations This book is a comprehensive introductory and survey text It covers all important topics and the latest developments in the field with over 400 references It is suitable for students researchers and practitioners who are interested in social media analysis in general and sentiment analysis in particular Lecturers can readily use it in class for courses on natural language processing social media analysis text mining and data mining Lecture slides are also available online Table of Contents Preface Sentiment Analysis A Fascinating Problem The Problem of Sentiment Analysis Document Sentiment Classification Sentence Subjectivity and Sentiment Classification Aspect Based Sentiment Analysis Sentiment Lexicon Generation Opinion Summarization Analysis of Comparative Opinions Opinion Search and Retrieval Opinion Spam Detection Quality of Reviews Concluding Remarks Bibliography Author Biography <u>Encyclopedia of Language Development</u> Patricia J. Brooks,Vera Kempe,2014-03-28 The progression from newborn to sophisticated language user in just a few short years is often described

as wonderful and miraculous What are the biological cognitive and social underpinnings of this miracle What major language development milestones occur in infancy What methodologies do researchers employ in studying this progression Why do some become adept at multiple languages while others face a lifelong struggle with just one What accounts for declines in language proficiency and how might such declines be moderated Despite an abundance of textbooks specialized monographs and a couple of academic handbooks there has been no encyclopedic reference work in this area until now The Encyclopedia of Language Development covers the breadth of theory and research on language development from birth through adulthood as well as their practical application Features This affordable A to Z reference includes 200 articles that address such topic areas as theories and research tradition biological perspectives cognitive perspectives family peer and social influences bilingualism special populations and disorders and more All articles signed and authored by key figures in the field conclude with cross reference links and suggestions for further reading Appendices include a Resource Guide with annotated lists of classic books and articles journals associations and web sites a Glossary of specialized terms and a Chronology offering an overview and history of the field A thematic Reader s Guide groups related articles by broad topic areas as one handy search feature on the e Reference platform which includes a comprehensive index of search terms Available in both print and electronic formats Encyclopedia of Language Development is a must have reference for researchers and is ideal for library reference or circulating collections Key Themes Categories Effects of language on cognitive development Fundamentals theories and models of language development Impairments of language development Language development in special populations Literacy and language development Mechanisms of language development Methods in language development research Prelinguistic communicative development Social effects in language acquisition Specific aspects of language development **Argumentation Mining** Manfred Stede,Jodi Schneider,2022-06-01 Argumentation mining is an application of natural language processing NLP that emerged a few years ago and has recently enjoyed considerable popularity as demonstrated by a series of international workshops and by a rising number of publications at the major conferences and journals of the field Its goals are to identify argumentation in text or dialogue to construct representations of the constellation of claims supporting and attacking moves in different levels of detail and to characterize the patterns of reasoning that appear to license the argumentation Furthermore recent work also addresses the difficult tasks of evaluating the persuasiveness and quality of arguments Some of the linguistic genres that are being studied include legal text student essays political discourse and debate newspaper editorials scientific writing and others The book starts with a discussion of the linguistic perspective characteristics of argumentative language and their relationship to certain other notions such as subjectivity Besides the connection to linguistics argumentation has for a long time been a topic in Artificial Intelligence where the focus is on devising adequate representations and reasoning formalisms that capture the properties of argumentative exchange It is generally very difficult to connect the two realms of reasoning and text analysis but we are

convinced that it should be attempted in the long term and therefore we also touch upon some fundamentals of reasoning approaches Then the book turns to its focus the computational side of mining argumentation in text We first introduce a number of annotated corpora that have been used in the research From the NLP perspective argumentation mining shares subtasks with research fields such as subjectivity and sentiment analysis semantic relation extraction and discourse parsing Therefore many technical approaches are being borrowed from those and other fields We break argumentation mining into a series of subtasks starting with the preparatory steps of classifying text as argumentative or not and segmenting it into elementary units Then central steps are the automatic identification of claims and finding statements that support or oppose the claim For certain applications it is also of interest to compute a full structure of an argumentative constellation of statements Next we discuss a few steps that try to dig deeper to infer the underlying reasoning pattern for a textual argument to reconstruct unstated premises so called enthymemes and to evaluate the quality of the argumentation We also take a brief look at the other side of mining i e the generation or synthesis of argumentative text The book finishes with a summary of the argumentation mining tasks a sketch of potential applications and a necessarily subjective outlook for the field **Constructing Grammar** Nancy Chih-Lin Chang,2008 **Simulating the Evolution of Language** Angelo Cangelosi,Domenico Parisi,2012-12-06 This book is the first to provide a comprehensive survey of the computational models and methodologies used for studying the evolution and origin of language and communication Comprising contributions from the most influential figures in the field it presents and summarises the state of the art in computational approaches to language evolution and highlights new lines of development Essential reading for researchers and students in the fields of evolutionary and adaptive systems language evolution modelling and linguistics it will also be of interest to researchers working on applications of neural networks to language problems Furthermore due to the fact that language evolution models use multi agent methodologies it will also be of great interest to computer scientists working on multi agent systems robotics and internet agents **Language, Cognition, and Computational Models** Thierry Poibeau,Aline Villavicencio,2018-01-25 How do infants learn a language Why and how do languages evolve How do we understand a sentence This book explores these questions using recent computational models that shed new light on issues related to language and cognition The chapters in this collection propose original analyses of specific problems and develop computational models that have been tested and evaluated on real data Featuring contributions from a diverse group of experts this interdisciplinary book bridges the gap between natural language processing and cognitive sciences It is divided into three sections focusing respectively on models of neural and cognitive processing data driven methods and social issues in language evolution This book will be useful to any researcher and advanced student interested in the analysis of the links between the brain and the language faculty **Proceedings of the EACL 2009 Workshop on Cognitive Aspects of Computational Language Acquisition** Afra Alishahi,2009 Proceedings of the Workshop on Psychocomputational

<u>Models of Human Language Acquisition</u> William Gregory Sakas,2005   **Psychocomputational Models of Human Language Acquisition** ,2005   <u>A Computational Model Of First Language Acquisition</u> Nobuo Satake,1990-01-01 This book describes a study on the question of what sort of innate knowledge it is that enables children to acquire a first language The author using a computational approach builds a model named BUD Bring Up a Daughter on the basis of the data linguists and psychologists have collected BUD is based on the empirists view of first language acquisition as opposed to that of the nativists that children make a number of rules in acquiring a first language and that over generalizations can be found in the acquisition of every aspect of a language Thus BUD has no built in procedure by which it computes the structures of a language A detailed description of the BUD model and its workings answers the question on which the study is based

Models of Language Acquisition Peter Broeder,Jaap Murre,2000 This book presents recent advances by leading researchers in computational modelling of language acquisition Sophisticated theoretical models can now be tested using simulation techniques and large corpora of linguistic data Renewed interest in learning neural networks and the ability to test new solutions to fundamental problems has fuelled debates in an already very active field The twenty four authors in this collection of new work have been drawn from departments of linguistics cognitive science psychology and computer science The book as a whole shows what light may be thrown on fundamental problems when powerful computational techniques are combined with real data A central question addressed in the book concerns the extent to which linguistic structure is readily available in the environment The authors consider the evidence in relation to word boundaries and phonotactic structure stress patterns text to speech rules and the mapping of lexical semantics one author arguing that a childs own output may serve as a key source of linguistic input Linguistic structure environment relations are central to the debate on the degree to which language learning is inductive or deductive this issue is considered here in studies of the acquisition of pluralization and inflectional morphology The book examines the power and utility of different modeling formalisms for different problems and approaches how far for example can connectionist models be used as models for language acquisition or Simple Recurrent Networks form the basis of a model of language acquisition To what degree can lexical items and categories be used in the construction of neural network models or Markov chains be deployed to investigate the characteristics of a general language learning algorithm Triggering Learning Algorithm This book will appeal to linguists psychologists cognitive scientists working in language acquisition It will also interest those involved in computational modelling in linguistics and behavioural science   *Speech and Language Processing: Computational Linguistics and Natural Language Processing* Elsa Harrington,2021-11-16 The interdisciplinary field that deals with the computational modeling of natural language is known as computational linguistics It studies various computational models that are used to answer linguistic questions Some of the theoretical frameworks which are used within this field are linguistic production structural linguistics linguistic comprehension and developmental linguistics The discipline makes use of concepts from other fields such as computer

science mathematics philosophy psychology artificial intelligence cognitive psychology psycholinguistics etc The field helps in the development of speech recognition software The objective of this book is to give a general view of the different areas of computational linguistics and its applications It strives to provide a fair idea about this discipline and to help develop a better understanding of the latest advances within this field Students researchers experts and all associated with speech and language processing will benefit alike from this book **A Computational Model of Language Acquisition in the Two-year-old** Jane Anne Collins Hill,1983 **Human Language Technology. Challenges for Computer Science and Linguistics** Zygmunt Vetulani,2011-04-13 This book constitutes the refereed proceedings of the 4th Language and Technology Conference Challenges for Computer Science and Linguistics LTC 2009 held in Poznan Poland in November 2009 The 52 revised and in many cases substantially extended papers presented in this volume were carefully reviewed and selected from 103 submissions The contributions are organized in topical sections on speech processing computational morphology lexicography parsing computational semantics dialogue modeling and processing digital language resources WordNet document processing information processing and machine translation **Computational Approaches to Language Acquisition** Michael R. Brent,1997 The past fifteen years have seen great changes in the field of language acquisition New experimental methods have yielded insights into the linguistic knowledge of ever younger children and interest has grown in the phonological syntactic and semantic aspects of the lexicon Computational investigations of language acquisition have also changed reflecting among other things the profound shift in the field of natural language processing from hand crafted grammars to grammars that are learned automatically from samples of naturally occurring language Each of the four research papers in this book takes a novel formal approach to a particular problem in language acquisition In the first paper J M Siskind looks at developmentally inspired models of word learning In the second M R Brent and T A Cartwright look at how children could discover the sounds of words given that word boundaries are not marked by any acoustic analog of the spaces between written words In the third P Resnik measures the association between verbs and the semantic categories of their arguments that children likely use as clues to verb meanings Finally P Niyogi and R C Berwick address the setting of syntactic parameters such as headedness for example whether the direct object comes before or after the verb *Theoretical and Computational Models of Word Learning: Trends in Psychology and Artificial Intelligence* Gogate, Lakshmi,2013-02-28 The process of learning words and languages may seem like an instinctual trait inherent to nearly all humans from a young age However a vast range of complex research and information exists in detailing the complexities of the process of word learning Theoretical and Computational Models of Word Learning Trends in Psychology and Artificial Intelligence strives to combine cross disciplinary research into one comprehensive volume to help readers gain a fuller understanding of the developmental processes and influences that makeup the progression of word learning Blending together developmental psychology and artificial intelligence this publication is intended for researchers

practitioners and educators who are interested in language learning and its development as well as computational models formed from these specific areas of research
