

## **Windows Network Proposal - Networking: Paper Example Essay**

### **Introduction**

Fixing Windows LLC has three locations in Houston, Dallas, and Los Angeles and is planning to expand because of the increasing business operations. The central staff of the Company is in Dallas and Houston. The Los Angeles Branch require secure remote access to the office at Houston. Fixing Windows LLC Company has WAN network connectivity with adequate bandwidth to facilitate the business operations between the offices. The following is a network proposal for the Company basing on the Windows Server 2016 operating system.

### **DNS and DHCP**

#### **DHCP Installation and Authorization**

The installation of the Dynamic Host Configuration Protocol (DHCP) can be either in installing the Windows Server 2016 or after (Matotek et al., 2017). The first step is to start the server manager in the computer administrative tools. Next is to add a role by clicking the role links for the setup wizard and click start. The role setup wizard then shows the present ones in the server, including DHCP. Select DHCP and start the role (Matotek et al., 2017). It then shows the available network connections with static IP addresses. Since Fixing Windows LLC has one WAN network, the wizard displays it as single, but it can have more. Next is to select the network and the wizard requests for DNS configuration, including the domain, preferred, and alternative DNS IPv4 servers (Matotek et al., 2017). For example, the parent domain can be fixingwindows.com, IPv4 address: 68.87.76.182, and the alternative one be 68.87.78.134.

#### **DHCP Scope (Continuation of DHCP Installation)**

After confirming the above addresses, the wizard then requests for Windows Server configuration, which is an optional step (Matotek et al., 2017). The arrangements do not affect the network, so it is better to skip, and the next step is to add the scope of the network. It includes adding the scope name, starting IP address, ending IP address, and the subnet type the activating it (Matotek et al., 2017). For example, the scope name can be 'Fixing,' the starting IP address can be 192.168.1.30, and the ending IP address is 192.168.1.220. After adding the scope, next is to enter the subnet mask and the optional default gateway. For example, the subnet mask can be 255.255.255.0, while the default gateway is 198.168.1.7. It is possible to add as many scopes depending on the business needs, and as the Fixing Windows LLC is expanding, more will be necessary. The final step is to install after confirming the setting using the administrative login credentials of the Windows Server 2016 (Matotek et al., 2017). The Windows Server 2016 then installs the DHCP server.

#### **DHCP Authorization**

DHCP authorization enables the server in the active directory domain through registration to support DHCP clients (Matotek et al., 2017). Permission, therefore, allows the domain to
